SOLVING RATIONAL MULTI STEP EQUATIONS 1

Instructions: Solve equation for x

$$1 \quad \frac{-8 - 3x}{2} = 11$$

Solution:

$$2 \quad \left| \frac{7x - 5}{4} = 11 \right.$$

Solution:

3	$5 = \frac{5(x-1)}{3}$
---	------------------------

Solution:

4	$\frac{9(6 - 2x)}{7} = 18$
---	----------------------------

Solution:

5	$3 = \frac{-3(11 - x)}{7}$
---	----------------------------

Solution:

6	$1 = \frac{2(x + 13)}{10 + x}$
---	--------------------------------

Solution:

7	$\frac{x - 16}{5} = x + 4$
---	----------------------------

Solution:

8	$\frac{3 - 3x}{4} = 3(2x + 1)$
---	--------------------------------

Solution:
