

TABLE CHALLENGE

**When you see 4 squares together:
times the first square and the second square together
the answer goes into the last squares.**

For example

	9	2	
--	---	---	--

What times 9 gives an answer in the 20s

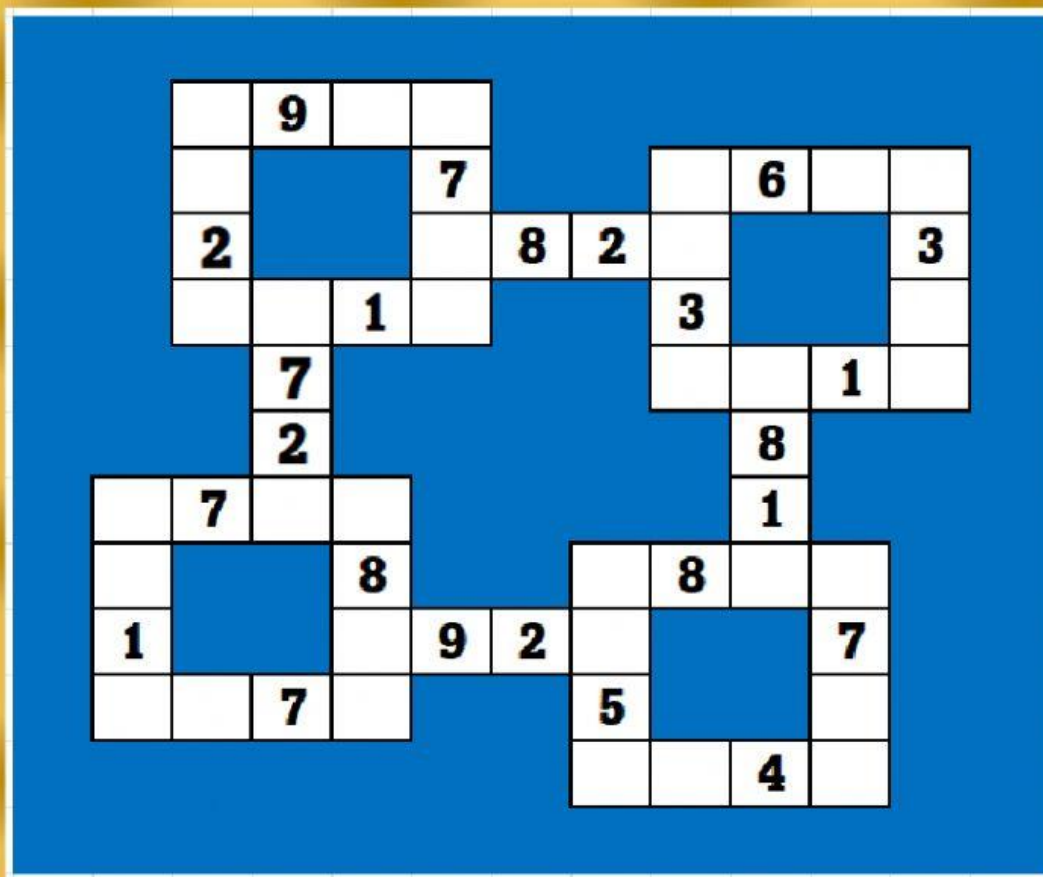

The only number in the 9 times table in the 20s is 27 so the first number must be 3 and the last number must be 27.

3	9	2	7
---	---	---	---

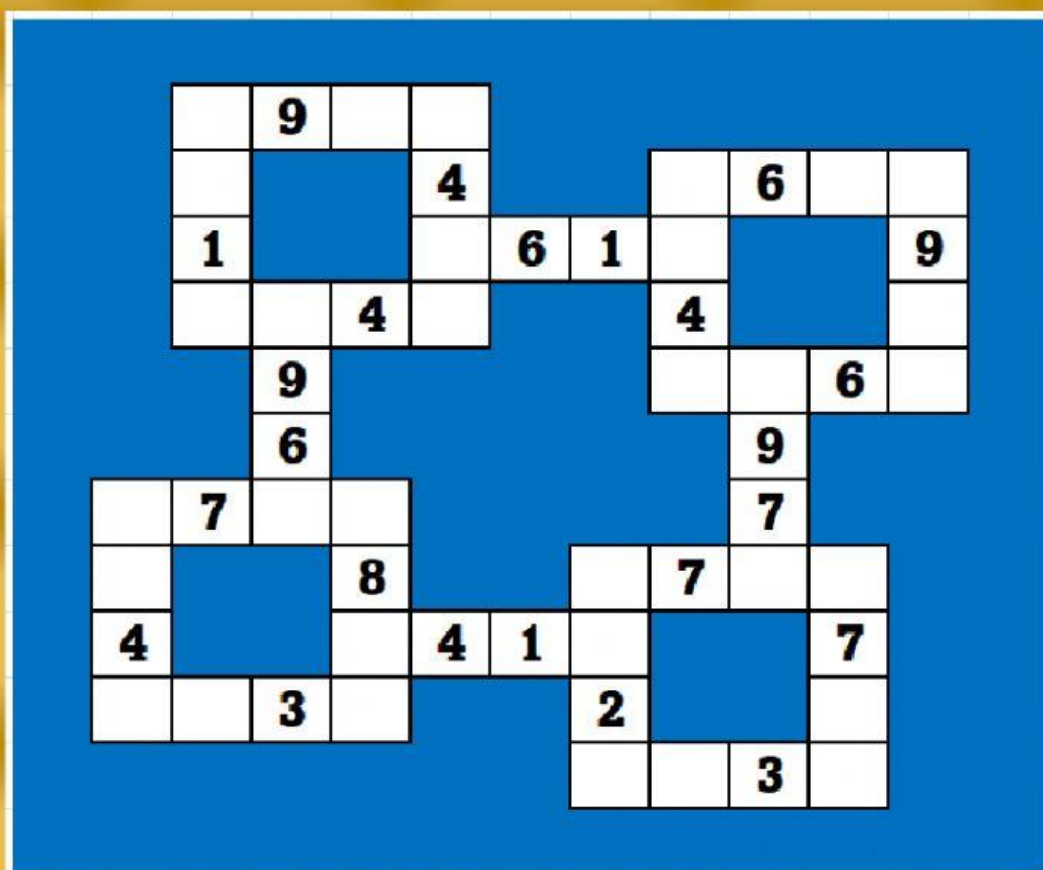

Keep going until all are filled in.

Now try these:
