

Matemáticas

1. Resuelve estas fracciones.

$$\frac{8}{9} + \frac{6}{7} = \frac{\quad}{\quad} + \frac{\quad}{\quad} = \frac{\quad}{\quad}$$

$$\frac{8}{9} - \frac{6}{7} = \frac{\quad}{\quad} - \frac{\quad}{\quad} = \frac{\quad}{\quad}$$

2. Simplifica las fracciones utilizando el m.c.d.

$$\frac{5}{25} : \quad = \frac{\quad}{\quad}$$

$$\frac{2}{8} : \quad = \frac{\quad}{\quad}$$

$$\frac{30}{40} : \quad = \frac{\quad}{\quad}$$

$$\frac{10}{35} : \quad = \frac{\quad}{\quad}$$

$$\frac{8}{20} : \quad = \frac{\quad}{\quad}$$

$$\frac{2}{6} : \quad = \frac{\quad}{\quad}$$

3. Compara las fracciones.

$$\frac{5}{7} \quad \frac{5}{8}$$

$$\frac{4}{7} \quad \frac{5}{11}$$

$$\frac{17}{36} \quad \frac{1}{2}$$

$$\frac{1}{6} \quad \frac{2}{11}$$

$$\frac{18}{36} \quad \frac{1}{2}$$

$$\frac{11}{12} \quad \frac{13}{14}$$

$$\frac{7}{13} \quad \frac{8}{13}$$

$$\frac{21}{36} \quad \frac{7}{12}$$

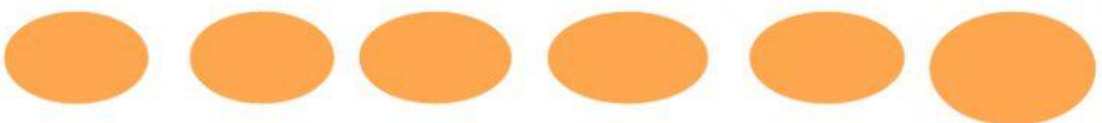

$$\frac{4}{7} \quad \frac{5}{9}$$

4. Pon los múltiplos en orden de los siguientes números.

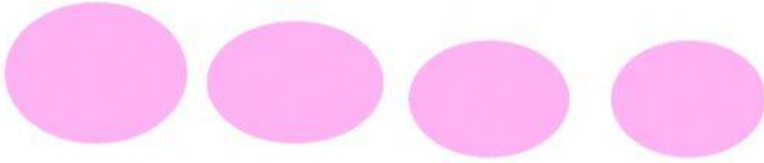

5

6

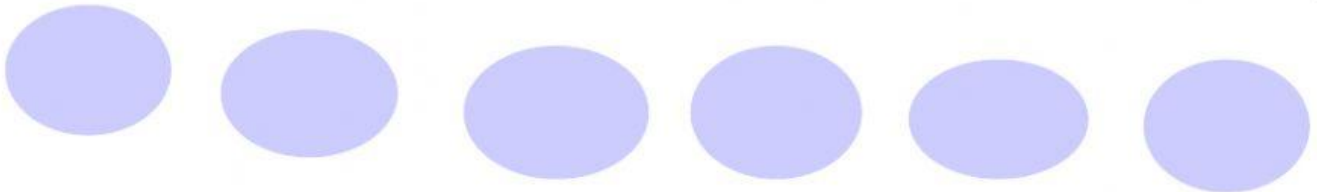

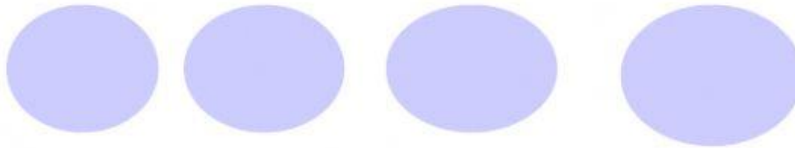

8

¡No olvides
poner 0!

10

m.c.m(5,6)=

m.c.m(5,8)=

m.c.m(5,9)=

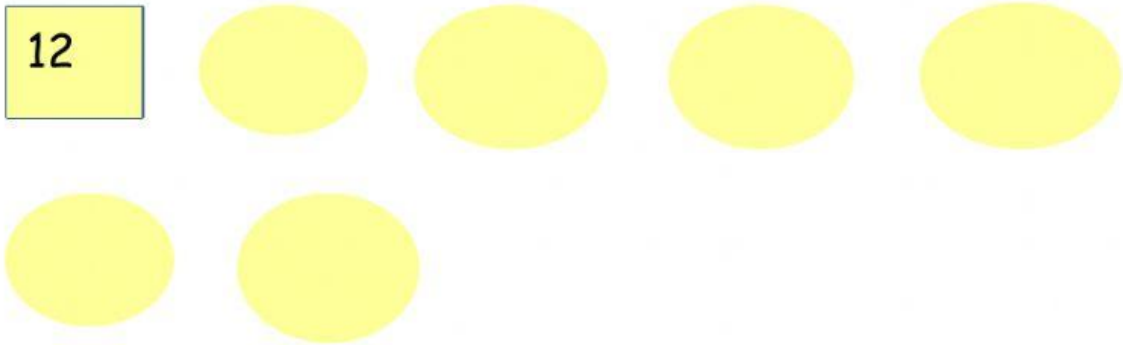

m.c.m(6,8)=

m.c.m(6,9)=

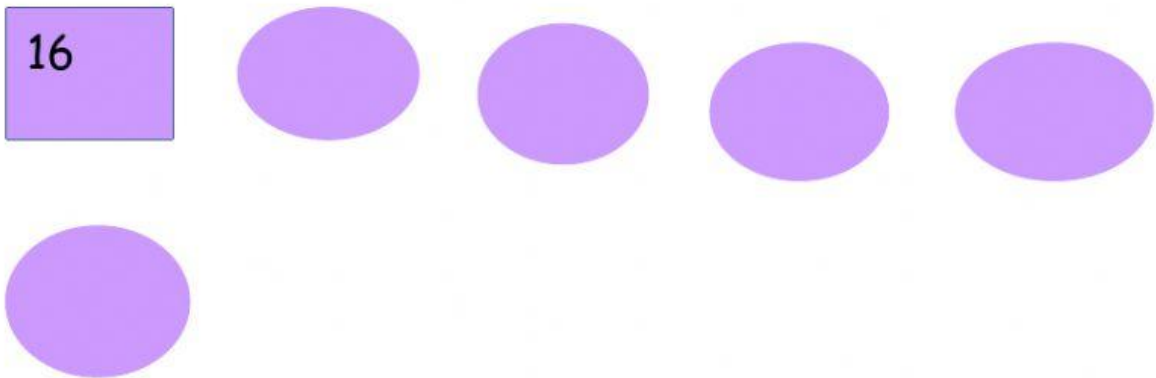

m.c.m(8,9)=

5. Pon los divisores de los siguientes números en orden.

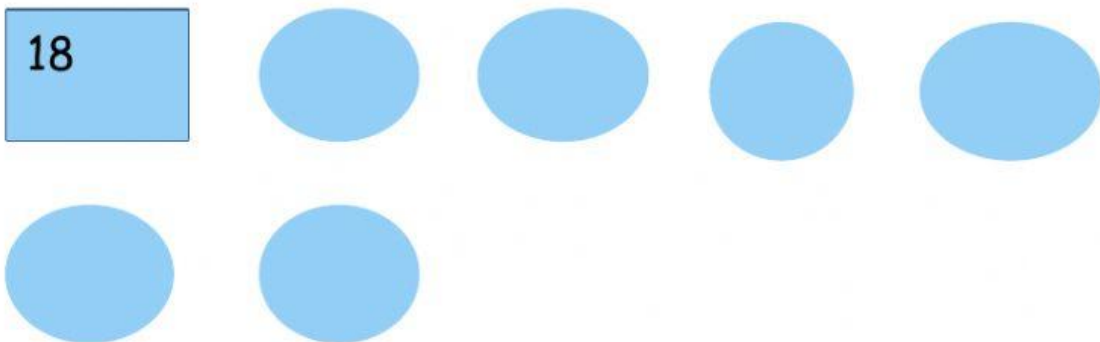

12

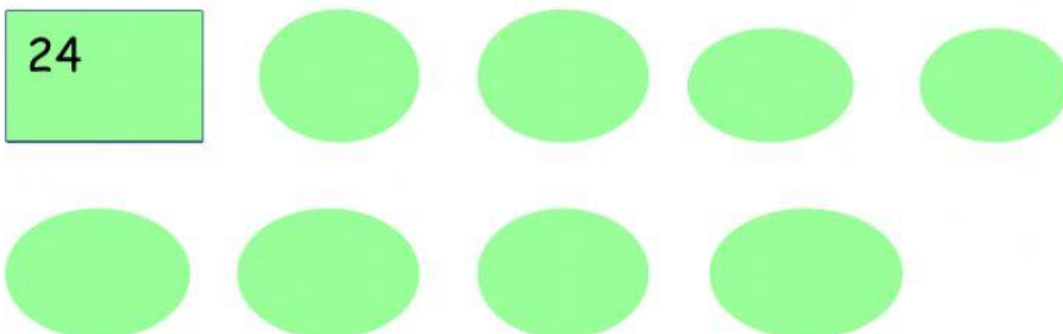

16

18

24

$$\text{m.c.d}(12,16)=$$

$$\text{m.c.d}(16,18)=$$

$$\text{m.c.d}(12,18)=$$

$$\text{m.c.d}(16,24)=$$

$$\text{m.c.d}(12,24)=$$

$$\text{m.c.d}(18,24)=$$
