    D. double-spaced

Text for question 15 – 18.

There was once a crow who did not like his feathers. "I wish I were a peacock!" he would say. "You are beautiful as you are!" the other crows insisted. "How plain and dull you seem to me!" he'd complain, and fly off to admire peacocks.

The peacocks walked around with their colourful tail feathers outstretched. To the delight of the crow, some of the peacock feathers lay on the ground when the peacocks left. Crow flew down to the ground and stuck the feathers into his wings and tail. He attached a few sticking up from his head. "Now I am as beautiful as a

LIVEWORKSHEETS

peacock," he said. But, when he went to join them in their walking, the peacocks punched him and hit him. What a fuss!

"You are not a peacock," they said, "Don't imitate us!" Bruised and still dragging some broken peacock feathers in his tail, he returned home.

After all his insults, no one wanted his company! As he sat alone, the other crows said, "It's foolish to try and be what you're not. Learn to love the feathers you've got.

15. The story above is about ….
    A. a beautiful peacock
    B. a plain and dull crow
    C. the peacocks and the crows
    D. the peacocks colourful feathers
16. How is the crow?
    A. Careless

Text for question 21 - 24.

Marie Currie was born in Polland 1867. She was the only person who gained two Nobel prizes at that time. She achieved one of the physics and one on chemistry. She was born as Marie Sklodowska, the daughter of a chemistry professor. She was the first woman who attended the University of Sorbonne in Paris. As a poor student, she lived in Paris on only ten cents a day for 3 years. In 1895, she married Pierre Currie, a chemis. They had two daughters: Irene and Eve. Marie managed three lives as researcher, wife and mother.

In 1898, Marie discovered radium. Later she developed a concept of radio activity, which marked the beginning of the atomic age. During world war I, Marie and her daughter completed a new medical tool – the X-ray. Marie died in 1934, only a year before her daughter, Irene, won the Nobel Prizes in chemistry.

21. The text tells us about the biography of ....
    A. Marie Currie
    B. The X-ray founder
    C. A Chemistry Proffessor
    D. The first woman in Paris

    C. the amount of protein per serving is more than the sugars
    D. the daily value percentage of calcium is less than that of trans fat

Read the text to answer questions 29 to 32.

Once upon a time there was a man who dug up a big earthenware box in his field. So, he took it home with him and told his wife to clean it out. When his wife was brushing, the brush fell into the inside of the box. The box suddenly began to fill itself with brushes. No matter how many were taken out, others kept on taking their place. So, the man sold the brushes, and the family managed to live quite comfortably.

Once a coin fell into the box by mistake, at once the brushes disappeared and the box began to fill itself with money. So now the family became rich; for they could take as much money out of the box as ever they wished.

Now the man had an old grandfather at home, who was weak and shaky. Since there was nothing else, he could do, his grandson set him to work taking money out of the box, and when the old grandfather grew weary and could not keep on, he would fall into a rage, and shout at him angrily, telling him was lazy and did not want to work.

One day, however, the old man's strength gave out, and he fell into the box and died. At once the money disappeared, and the whole box began to fill itself with dead grandfathers. Then the man had to pull them all out and have them buried, and for this purpose he has to use up again all the money he had received. And when he was through, the box broke, and he was just as poor as before.

29. From the story we can learn that …
    A. no body is perfect
    B. no one can live alone
    C.don't be selfish and greedy
    D.be careful with your belongings

    C. It would be gone away
    D. It would get more and more
32. … he would fall into a rage, and shout at him angrily. (Paragraph 3)
    The word "he" refers to …
    A. A man
    B. His wife
    C. Grandson
    D. Grandfather

Text for question 33 – 36.

The cheetah is a large cat native to Africa and central Iran. It is the fastest land animal, estimated to be capable of running at 80 to 128 km/h. Cheetah can run fast because of its long thin legs and a long tail.

Cheetah body length is typically reaches 67–94 cm. Adults weigh between 21 and 72 kg (46 and 159 lb). Its head is small and rounded, and has a short snout and black tear-like facial streaks.

The coat is typically tawny to creamy white or pale buff and is mostly covered with evenly spaced, solid black spots. Four subspecies are recognized.

The cheetah lives in three main social groups: females and their cubs, male groups, and solitary males. While females lead a nomadic life searching for prey in large home ranges, males are more sedentary and instead establish much smaller territories in areas with plentiful prey and access to females. The cheetah is active during the day, with peaks during dawn and dusk.

33. The text is written to….
    A. give detailed physical description and the lives of cheetah

46. What is probably relation between Mr' henry and Anne?
    A. Father and daughter
    B. Teacher and teacher
    C. Teacher and Stude
    D. They are friend.

This following text is for question 47-50.

The Dragon's-Blood Tree or Dracaena Cinnabari is one of the coolest-looking trees ever native to the Socotra archipelago, part of Yemen, located in the Arabian Sea. It is so called because of the red sap that the trees produce which resembles dragons' blood.

Like other monocotyledons, such as palms, the dragon's blood tree grows from the tip of the stem. It branches at maturity to produce a unique appearance, with an "upturned, densely packed crown having the shape of an uprightly held umbrella". Its leaves are found only at the end of its youngest branches; its leaves are all shed every 3 or 4 years before new leaves simultaneously mature. Branching tends to occur when the growth of the terminal bud is stopped, due to either flowering or traumatic events.

Its fruits are small fleshy berries which contain between 1 and 3 seeds. As they develop they turn from green to black, and then become orange when ripe. The berries are eaten by birds and thereby dispersed. The seeds are 4–5 mm in diameter and weigh on average 68 mg. The berries exude a deep red resin, known as dragon's blood.
