

What do the pronouns refer to?

The first vaccine was created in 1796. <u>It</u> was against smallpox, which had killed a lot of people before 1796. Since then, vaccines have inoculated millions of people from serious diseases like polio, and measles, and most recently Covid-19. No one can forget year 2020 and 2021 when thousands of people were killed by Covid-19, and now, with Covid-19 vaccines, we can live normally with the safeguard <u>they</u> provide. Besides, Vaccines boost our immune system. <u>They</u> train <u>it</u>, let <u>it</u> run through some practices so that <u>it</u> can be ready to ward off the bona fide diseases. Some vaccines are very potent and can confer life-long immunity, so with one or two shots of <u>them</u>, you can be safely protected from diseases. Moreover, vaccines help us save a lot of money. With <u>them</u>, diseases are prevented, so we don't have to spend a lot of money on hospitals, doctors, and other medical needs. Without vaccines, these diseases would incur huge cost for both the government, and individuals. Lastly, vaccines are safe. To develop a vaccine, physicians have to study the virus carefully, and test <u>it</u> on animals or even on humans before <u>it</u> is ready to use. Vaccination causes no trauma. Also, people are advised to receive a vaccine only when <u>they</u> are in good health conditions, then the side effect of <u>its</u> is almost none. However, a rising tide of parents reject vaccine, and refuse to vaccinate <u>their</u> children. There are some reasons for that. Firstly, <u>they</u> are afraid of the side-effects of vaccines. Vaccines are not 100% safe; <u>they</u> may cause tiredness, nausea, or even deaths. Even though the number of deaths caused by vaccines is very low, <u>it</u> still makes parents scared. Secondly, a lot of parents believe in rumours about vaccines. Some of <u>them</u> believe that vaccines can cause autism; others think vaccines sterilize <u>their</u> children. Even worse, vaccines are rumoured to infiltrate our bodies together with some spy chips and steal our information. Nobody knows where these rumours are from, but it is clear that because of <u>them</u>, the rate of vaccination in children is flagging in many countries.
