

INSIDE A VOLCANO

The diagram shows a cross-section of a volcano. At the top, a cloud-like shape represents the smoke plume. Below it, the central opening is the crater. The steep, sloping sides are the flanks. Inside the volcano, there is a central vertical passage (the vent) and a larger, horizontal chamber (the magma chamber) at the base. Arrows point from the labels to these specific features: the smoke plume, the crater, the flanks, the vent, the magma chamber, and the base of the volcano.
