

Reproduction of angiosperms

03

COMPLETE WITH THE CORRECT WORD

_____ is when pollen from the stamen is transferred into the stigma.

The _____ are the male reproductive organs.

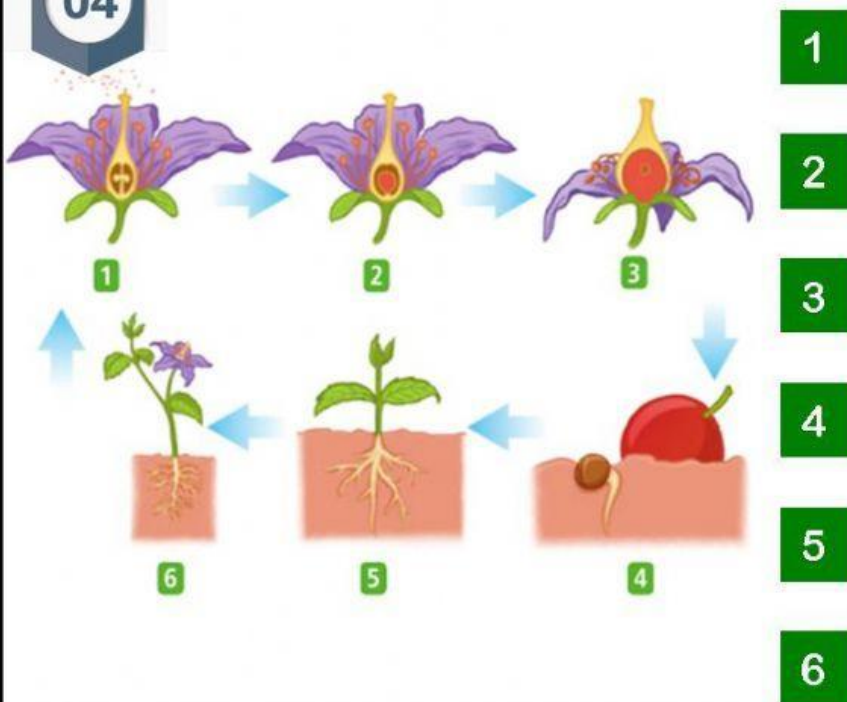

_____ protect the flower before it opens.

_____ can be a variety of colours.

When the _____ joins the ovules in the ovary, fertilisation occurs.

04

LOOK, READ AND PUT IN ORDER

A seed develops inside the ovary.

The seeds can germinate and new plants grow.

Pollen goes into the stigma down to the ovary.

The new plant produces flowers.

The fruit falls, opens and releases the seeds.

The ovary then grows into a fruit with seeds.
