

Task 1: Watch video: <https://www.youtube.com/watch?v=xCdXURXMdFY>

Area is the measurement of space inside a 2-Dimensional shape. There are lots of different ways of calculating the area of regular shapes. To calculate the area of a rectangle we use the measurements of sides. Often we will use square centimetres (cm^2) or square metres (m^2). Instead of counting the squares inside a rectangle, we can use the formula - **length $\times$ width**.

Task 2: Calculate the area of each of the shapes- write/type the answers in the answer boxes. Remember that the answer must be written in cm^2

1.

2.

3.

4.

5.

6.

The most efficient way to calculate the area of this rectangle is to count each square one by one.

Do you agree or disagree? Explain your answer below.
