

THE NORTHERN LIGHTS

WHAT CAUSES THE NORTHERN LIGHTS?

The energy that produces Northern Lights is from the Sun. 🌞

The Sun creates The Solar wind.

This Solar wind runs 🏃 into the Earth. 🌍

And when it arrives to the Atmosphere, it explodes 💥
in contact with the oxygene and nitrogen.

The result of the explosion is the Aurora Borealis or Northern Lights

Northern Lights have different colours.

Purple, pink and blue Northern Lights has more **nitrogen**.

Green Northern lights has more **oxygen**.

After watching the video. Make a drawing of Northern Lights and explain your family what causes the Northern lights.
