## Animal Senses

## DIRECTIONS: PUT THE SENSES OF THE LEOPARD IN THE CORRECT PLACE

Touch Smell Hearing Taste Sight

## DIRECTIONS: WRITE THE LETTER OF THE SENSE ACCORDING ITS FUNCTION

1. Smell	<ul> <li>a) Buds on the clouded leopard's tongue respond to chemicals in food, sending signals to the brain.</li> </ul>
2. Hearing	<ul> <li>Receptors in the cat's nose are sensitive to chemicals in the air. Those receptors send signals to the brain, which interprets them as different odors.</li> </ul>
3. Taste	c) When the clouded leopard's whiskers brush against an object, these receptors send signals to its brain, which processes them.
4. Touch	<ul> <li>d) Light receptors in the clouded leopard's eyes respond to light and send signals to the brain.</li> </ul>
e) Sight	<li>f) Sound receptors in the ear respond to vibrations in the air, causing signals to travel to the brain.</li>
