

CHANGES OF STATE

Water **temperature increases**.

evaporation vapour.

EVAPORATION (Liquid to gas): When **liquid** water is **heated**, it **changes** from a liquid state to a **gas** state. This gas is called **water**

melting

MELTING (Solid to liquid): Ice is water in a **solid** state. When it **heats up**, it **changes** back into a **liquid** state.

Water **temperature decreases**.

condensation

CONDENSATION (gas to liquid): When **water vapour cools**, it **changes** back into a **liquid** state.

freezing

FREEZING (liquid to solid): When **liquid** water is **cooled** to a very low temperature, it **changes** into **ice**, which is water in a **solid** state.

Drag and drop the red arrow for heating and blue arrow for cooling. Then write the correct change of state: **evaporation**, **condensation**, **freezing** and **melting**.

States of Water

ice

water

water vapour

Use the words ice, water and water vapour to complete the table below:

Freezing		to	
Melting		to	
Evaporation		to	
Condensation		to	

WATER
