

A. Read Meet the Camel!

  	Camels are mammals with humps on their backs. There are different types of camels. African camels have two humps on their backs. But the dromedary camel has one hump. Camels live in Africa and Asia. They live in the rocky desert. It is very hard to live in the desert because it's hot and dry at the same time. The wind blows sand and ice at them. Luckily, they can close their nose holes. They also have long eyelashes to protect their eyes. Camels live in groups. Camels eat most desert plants including thorns. But they can survive a lot of time without food or water because of their humps.
---	---

B. Drag and drop the words. Put them in the correct order.

	mammals	Camels	are
1. Which kind of animal are camels?			

	live	in Africa	Camels
2. Where do camels live?			

	and dry	The desert	is hot
3. What is the desert like?			

	eat	desert plants	Camels
4. What do camels eat?			

C. Click TRUE or FALSE. If it's false, transform the sentence into negative. Look at the example.

How to make negatives:

live	don't live	hurts	doesn't hurt	have	don't have	eat	don't eat
------	------------	-------	--------------	------	------------	-----	-----------

1. Camels live in America	TRUE	FALSE	Camels don't live in America
2. Camels live alone.	TRUE	FALSE	
3. The wind doesn't hurt the camel's eye.	TRUE	FALSE	
4. Some camels have one hump.	TRUE	FALSE	
5. Camels eat animals.	TRUE	FALSE
