

Conserving water in the garden

 Natural fertiliser made of rotted plant materials.

 Limit evaporation by watering the garden early in the morning.

 Saving water by planting plants that do not need a lot of water.

 Cover vegetable beds with cloth keeps the soil & plants cool & it prevents water evaporation.

 Is a thin layer of straw, dried grass, dried leaves, nutshells etc. prevents evaporation

 Use the soapy water from showers, baths, washing machines to water the garden.

 Remove weeds regularly as it competes with plants for water.

 Choose lawn grass that is drought tolerant & needs less water.
