ECO-FRIENDLY HOUSES

What's an eco-friendly house?

An eco-friendly house is a house that **respects and takes care of the environment** instead of polluting the land, air and water. An eco-house **reduces energy consumption and waste**.

It provides its **own energy** requirements, it **deals with its own waste products** without environmental damage, it **saves water, reduces rubbish** and **provides most of the food and water** requirements of its occupants.

Which technologies and methods do eco-friendly houses have?

The technologies can be classified into 3 groups:

ENERGY	PREVENTING WASTE OF LIGHT & HEAT	SAVING WATER & REDUCING RUBBISH
• renewable energy sources • solar panels • solar water heating • radiant floor heating	• energy efficient windows • wall insulation • green roof • efficient light bulbs	• growing your own food • composting • recycling • rainwater collection

<u>**Activity 1**</u>: Write each word from **the previous table** under the correct photo.

Solar Panel — Solar Controller — Hot Water Cylinder	Wind / Geothermal / Solar / Hydropower / Biomass	PAPER / GLASS / PLASTIC / METAL recycling bins
	Rainwater Collection Tank
