Name :

Matter

Choose the correct word from the box to complete the following sentences.

Everything around us is _____. Matter is defined as everything that has _____ and takes up _____ or has volume. Weight is how _____ something is. _____ is the amount of space something occupies. Different states of matter will fill volumes in different ways depending upon how big, little, long or short the object is.

Matter comes in different _____, and the three common states are known as solid, liquid and gas. _____ state keep their own shape and do not flow in a given temperature. Example of solids are study-table, sugar cubes, _____, rock, most metals, etc. Ice is a solids as well, but when it melts, it becomes_____.

Liquid flows, move around a little and fill up _____ you put them in, like a water bottle. So we can say they _____ the space inside the containers we fill them in. Water has weight, if you carry a water bottle with you and as you drink from the bottle its get lighter and lighter. Giving you a good idea about the weight of the water.

_____ can't be seen easily. But it's occupies space and has weight.

space	volume	states	liquid	glass	matter	solid
heavy	occupy	gas	weight	containers
