

Round to Nearest 1,000

Rounding to the nearest thousand is just like rounding to the nearest ten and hundred.

The population of Cassandra's town is 6,643.
Is the population about 6,000 or 7,000?

You are rounding to thousands, so look at the hundreds digit. Is it less than or greater than 5?
Greater; so, you would round 6,643 to 7,000.
The population is about 7,000.

Akira's town has a population of 5,237. How can you round that number to the nearest hundred?

You are rounding to hundreds, so look at the tens digit. Is it less than or greater than 5?
Less; so, you would round 5,237 to 5,200.
The population is about 5,200.

Round to the nearest hundred. Underline the digit that helps you know which way to round.

1. 369

2. 135

3. 2,187

4. 3,746

5. 9,260

6. 1,742

7. 7,309

8. 5,691

Round to the nearest thousand. Underline the digit that helps you know which way to round.

9. 6,809

10. 3,579

11. 2,469

12. 1,333

13. 7,168

14. 5,702

15. 9,088

16. 4,625
