

Let 's practise.

Student's name: _____

1- Put the words in the right place.

SECONDARY CONSUMERS

ADAPT

FOOD CHAIN

PRODUCERS

PRIMARY CONSUMERS

HUMAN BEINGS

SURVIVE

A- In order for plants and animals to survive in a particular biome, they need to _____

B- In order to _____, animals need to get energy by eating other living things.

C- A _____ is a feeding relationship.

D- There are different levels in a food chain. 1st _____ (plants) , 2nd _____ (herbivores), 3rd _____ (carnivores or omnivores).

E- At the top of the food chain, we find _____

2- Tick the TRUE statements. Correct the FALSE ones.

a- There is only one food chain in a biome.

b- If the population at any level of the food chain changes, this change can affect all the other organisms in that biome.

c- There are a lot of human beings in all the different biomes.

d- Human activity is never harmful to the environment.

the 1990s, the number of people in the world who are under 15 years of age is expected to increase from 1.1 billion to 1.5 billion.

As the world's population grows, the demand for food and other resources will increase. This will put pressure on the environment and on the world's food supply. It is important that we find ways to meet this demand without harming the environment.

One way to do this is to use sustainable agriculture. This means using farming methods that do not harm the environment and that can be continued for a long time. This can be done by using natural resources like soil and water in a way that does not deplete them.

Another way to do this is to use renewable resources like wind and solar power. These resources can be used to generate electricity and heat without polluting the environment. This can help to reduce the world's dependence on fossil fuels.

Finally, we can use technology to help us meet the world's needs. For example, we can use genetic engineering to create crops that are more resistant to pests and diseases. This can help to increase the world's food supply without harming the environment.

There are many other ways to meet the world's needs without harming the environment. It is important that we find ways to do this so that we can live in a sustainable world for generations to come.

One of the most important things we can do is to reduce our consumption of resources. This means using less energy, less water, and less material. This can help to reduce the world's demand for resources and to protect the environment.

Another important thing we can do is to recycle our waste. This means reusing materials that have been used before. This can help to reduce the amount of waste that we send to landfills and to protect the environment.

Finally, we can protect the environment by creating national parks and other protected areas. These areas can help to preserve the world's natural resources and to provide a place for people to enjoy nature.

There are many other things we can do to protect the environment and to meet the world's needs. It is important that we all do our part to make the world a better place for everyone.

One of the most important things we can do is to educate the public about the environment. This means teaching people about the problems we face and about the ways we can solve them. This can help to create a more sustainable world for everyone.

Another important thing we can do is to support sustainable businesses. These are businesses that use sustainable practices and that do not harm the environment. This can help to create a more sustainable economy and to protect the environment.

Finally, we can protect the environment by creating a global treaty. This treaty would set rules for how we use the world's resources and how we protect the environment. This can help to ensure that we all live in a sustainable world for generations to come.
