

A horizontal number line is shown, ranging from 0 to 10. Major tick marks are labeled with integers from 0 to 10. Between each integer, there are 10 smaller tick marks, representing tenths. Above the number line, there are six empty boxes. Lines connect these boxes to specific points on the number line: the first box labeled '0,5' points to the 5th tick mark after 0; the second box points to the 2nd tick mark after 2; the third box points to the 3rd tick mark after 3; the fourth box points to the 4th tick mark after 4; the fifth box points to the 7th tick mark after 7; and the sixth box points to the 9th tick mark after 9.

$$810 - 80 = \underline{\hspace{2cm}}$$
