BODMAS

I can solve expressions using the order of operations.

Here are some multi-part expressions. Complete the underlined part of the expression first then use the answer to that to complete the expression.

Here is an example: $3 \times \underline{(2 + 6)}$

$$3 \times \quad 8 \quad = 24$$

1. $7 \times \underline{(8 - 3)}$

2. $7 + \underline{9 \times 2}$

3. $10 \div (6 - 4)$

4. $12 \div (7 - 4)$

5. $(8 + 9) + 6^2$

6. $21 \div \underline{(4 + 3)}$

7. $10 - \underline{9 \div 3}$

8. $7 + 6 \times 4$

9. $(12 + 20) \div 4$

10. $(13 - 6) \times 5$

11. $9 \times \underline{(3 + 3)}$

12. $2^3 - \underline{(3 + 1)}$

13. $(10 + 5) \div 5$

14. $12 \div (7 - 4)$

15. $\underline{(11 - 3)} \times 7$

Decide which part of each expression to calculate first, underline and complete as above.

1. $(12 - 7) \times 8$

2. $9 + 2 \times 7$

3. $18 \div (8 - 2)$

Good Luck !
