

## VARIABLES

A student was doing an experiment using the scientific method. A picture of the student's project is shown below.

These are the **different variables** in the experiment

- a. light shining in the plants
- b. type of soil the plant is growing
- c. brightness of the light shining on the plant
- d. Temperature of the air (place) in which the plant is growing.
- e. How does the brightness of light affect the growth of the plant?

Look at the pictures carefully. From the above experiment identify the

**ONE** variable that is **changed** (**Choose one from the above and write in the box below**)

The variable that is **measured** (**Choose one from the above and write in the box below**)

The variables kept **same** (**Choose from the above and write in the box below, use comma to write the variables**)
