The leafy sea dragon is the slow swimming fish that can only be found in the coastal waters of Southern _____ down to 82 feet deep. These curious creatures utilize their leaf-shaped appendages to help them blend with the surrounding _____ and _____ in their environment. They will even sway back and forth like plants in the water. Camouflage is their primary defense against predators. In addition, their body is covered in hard, bony plates with spines. When threatened, a leafy sea dragon may curl up and present its spines to attack fish. Leafy sea dragons can _____ to 14 inches long. It is thought that they can live seven to ten years. Since sea dragon have no teeth, they possess a tube-like snout that acts like a straw to suck in prey and _____ it whole. They must feed constantly on small organisms like plankton and shrimp. Mating takes place during the _____. A female can lay 200 to 300 eggs. She will deposit them in the male’s brood patch located on the underside of his tail. Males are responsible for _____ the eggs. The male will incubate the eggs for around 6 weeks. When the eggs hatch, the male only releases a few at a time, causing it to take hours or days for all the young to be released. Leafy sea dragons are threatened by _____, habitat destruction and poaching. It is illegal to _____ leafy sea dragons from the _____.
