

# *Geography*

## Rock Types

Igneous

Sedimentary

Metamorphic

# ***Types of rocks:***

1. \_\_\_\_\_ rocks are formed by magma cooling down.

2. \_\_\_\_\_ rocks are formed when plants and minerals are compressed together.

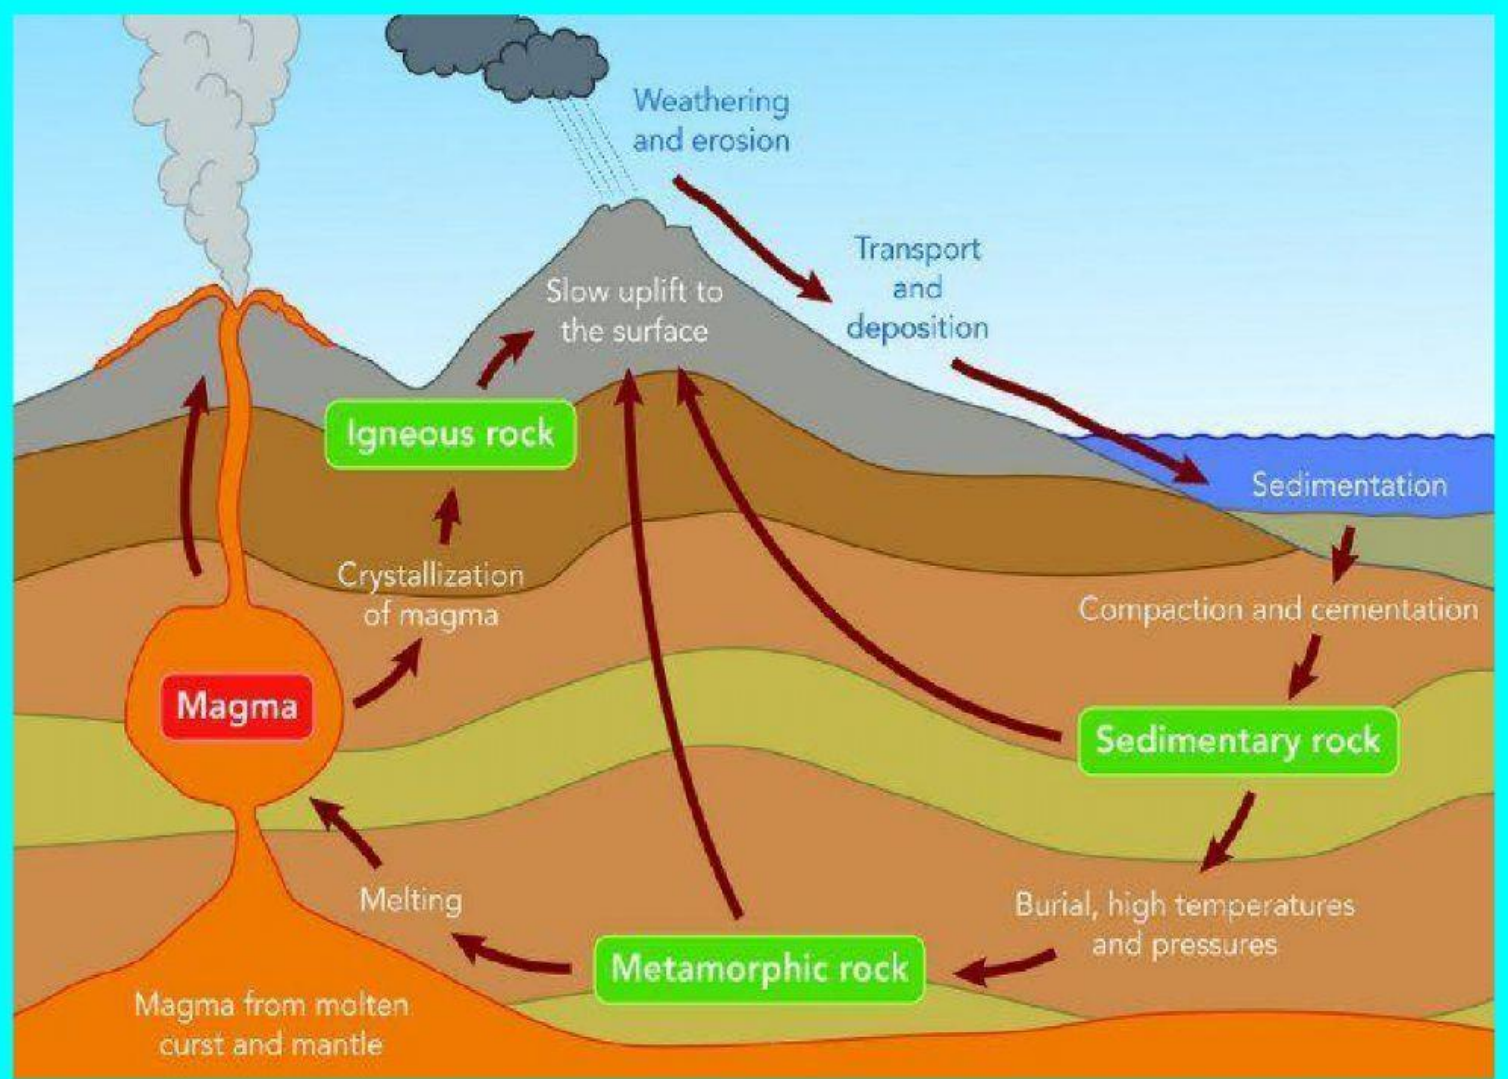

3. \_\_\_\_\_ rocks are formed by pressure and high temperature.

# Fun facts about the rock cycle

1. Rocks go through a continuous cycle of change.
2. Igneous rocks are made when lava or magma from a volcano hardens into rock.
3. When the rock is exposed to air, erosion begins.
4. Almost immediately, wind and rain weather the rocks and cause them to erode into sediment.
