Art has always been an interesting endeavor and it has been for a rather long period of time. Artists throughout the years have made a name for themselves and left lasting legacies that allowed many art lovers today to thank them for. And art, in any of its forms, has many stories to tell. There are plenty of stories about certain famous artists and their works. Such an example can be Leonardo da Vinci. Although many may have heard about Leonardo da Vinci's most famous artwork, the Mona Lisa, only a few may have known that it took the renowned artist 12 years just to paint and perfect Mona Lisa's lips. No wonder people are still trying to consider her mystical smile. During the time when the famous artwork was stolen from the Louvre in 1912, there were six replicas that were sold as originals, each at a very handsome price. This was done for a good three years until the original painting was finally recovered. Another thing to mention about Leonardo da Vinci is that he wrote all his personal notes in reverse, requiring others to use a mirror in order to read them.

Установите соответствие между текстами и их темами, выбрав тему из выпадающего списка.

Используйте каждую тему только один раз. В задании одна тема лишняя.

This text deals with ...

1. Groups of stars.
 2. Hot clouds of gas.
 3. Moving to the west.
 4. Giving out light.
 5. Orbiting round stars.
 6. The nearest star.
- A.** Over millions of years, hot clouds of gas called 'nebulae' grow until they explode and form huge, blazing balls of fire. This is how stars are born. Our own sun is a star. Eventually, like all stars, it will run out of fuel and die. Don't worry though — this won't happen for another 5 billion years!
- B.** Stars are sources of light. This is the reason they shine so brightly in the sky. The moon, planets and comets also shine, but they don't give out their own light. They just reflect it from the sun.
- C.** Stars are very, very far away. In fact, when their light reaches our eyes, we sometimes see them as they were thousands of years ago. Our sun is the nearest star to Earth, but it is still about 160 million km away! It is part of the Milky Way galaxy, a white band of stars that stretches across the night sky.
- D.** Constellations are groups of stars. If you draw lines between them (and use lots of imagination) they sometimes look like objects, animals or people. The ancient Greeks thought that Orion looked like a giant hunter with a sword attached to his belt.
- E.** As the earth moves around the sun, we see the constellations in different positions in the sky at different times of the year. In the same way, the whole sky seems to move towards the west as the earth rotates on its axis throughout the night.
