

Arthropods

Arthropods have six or more legs.

They have an external skeleton called an exoskeleton.

Insects, like an ant, have six legs.

Arachnids, like spiders, have eight legs.

Crustaceans, like crabs, have ten legs.

Myriapods, like millipedes have more than 10.

They can live on land, in water and fly.

Word Bank:

Fly millipedes ant ten six
Six water crabs land more
Spiders exoskeleton eight
