
EXCRETORY SYSTEM
Expels waste from the body.
The URINARY SYSTEM is responsible for removing liquid waste from our body.
The KIDNEYS filter the blood and separate the waste and water.
Water and waste forms URINE
The URINE goes down two tubes called URETERS to the BLADDER.
When the BLADDER is full, you must go to the bathroom.
The BLADDER releases URINE through the URETHRA.
SWEAT is a mixture of water and minerals.
When your body is too hot , SWEAT GLANDS produce SWEAT.
