

BIOLOGY:

1. Watch the video below;

Spiky invader

The crown-of-thorns starfish loves to eat coral. In fact, it loves it so much that if a community of these beasts moves onto a coral reef, they may strip it bare.

What do starfish love to eat?

BIOLOGY:

The big one

Giant waves called tsunamis occasionally cause devastation to coastal communities. Buildings and boats are tossed around and crushed.

What are giant waves called?

Echolocation

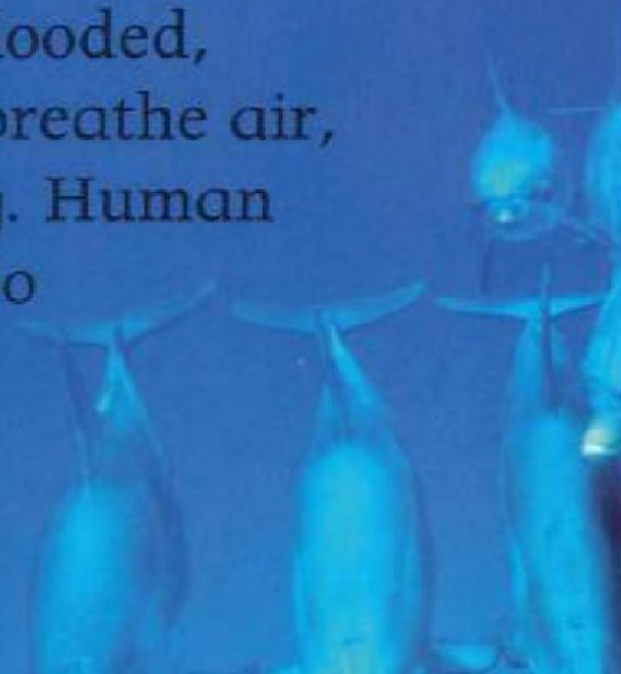

Dolphins talk to each other with clicks. The clicks also help a dolphin to find its prey. How? Because the noise bounces off objects in the water. It's called echolocation.

How do dolphins talk?

BIOLOGY:

Marine Mammals

Mammals are warm-blooded, have lungs (not gills), breathe air, and suckle their young. Human beings are mammals. So are whales, dolphins, and porpoises. As a group, these are the cetaceans.

Mammals are ... ?
