

1

$$\begin{array}{r}
 \square \square \\
 8 \overline{) 456} \\
 - \square \square \\
 \hline
 \square \square \\
 - \square \square \\
 \hline
 \square
 \end{array}$$

Diagram illustrating a subtraction problem using base ten blocks. The dividend is 456, and the divisor is 8. The quotient is represented by two tens blocks and one unit block. The remainder is represented by one unit block.

2

$$\begin{array}{r}
 \square \square \\
 4 \overline{) 376} \\
 - \square \square \\
 \hline
 \square \square \\
 - \square \square \\
 \hline
 \square
 \end{array}$$

Diagram illustrating a subtraction problem using base ten blocks. The dividend is 376, and the divisor is 4. The quotient is represented by two tens blocks and one unit block. The remainder is represented by one unit block.

3

$$\begin{array}{r}
 \square \square \\
 3 \overline{) 294} \\
 - \square \square \\
 \hline
 \square \square \\
 - \square \square \\
 \hline
 \square
 \end{array}$$

Diagram illustrating a subtraction problem using base ten blocks. The dividend is 294, and the divisor is 3. The quotient is represented by two tens blocks and one unit block. The remainder is represented by one unit block.
