

Remember these steps to round!

Step 1: Underline the digit to be rounded

Step 2: Look at the digit to the right of the place being rounded

Step 3:

- If the digit is 4 or less, let it rest! (the underlined digit remains the same)
- If the digit is 5 or more, raise the score! (add 1 to the underlined digit)

Step 4: Get rid of any digits after the underlined digit

Step 5: Once you have the whole numbers, divide them together!

Round the following number:

$$14.1 \div 7$$

Step One 14.1	Step Two 14.1
Step Three 14	Step Four $14 \div 7 = 2$

Directions: Estimate each quotient by rounding either the dividend or divisor to the nearest whole number.
