

Chapter 13 The Pythagoras' Theorem

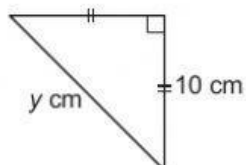

MASTERY

13.1

1. Using the Pythagoras' Theorem, find the value of y in each of the following diagrams. Give your answers correct to two decimal places.

(a)

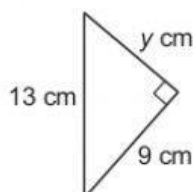

$$y^2 = \boxed{}^2 + \boxed{}^2$$

$$y^2 = \boxed{}$$

$$y = \sqrt{}$$

$$y = \boxed{} \text{ cm}$$

(b)

$$13^2 = \boxed{}^2 + \boxed{}^2$$

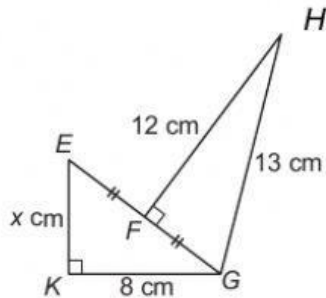

$$y^2 = 13^2 - \boxed{}^2$$

$$y = \sqrt{}$$

$$y = \boxed{} \text{ cm}$$

2. Calculate the value of x in each of the following diagrams:

(a)

$$GF^2 = 13^2 - \boxed{}^2$$

$$GF^2 = \boxed{}$$

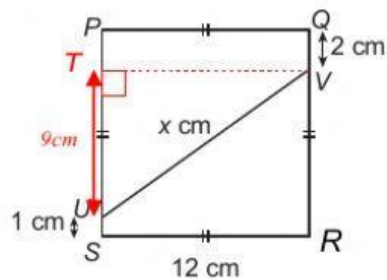

$$GF = \sqrt{} = \boxed{} \text{ cm}$$

$$EG = 2 GF = 10 \text{ cm}$$

$$x^2 = 10^2 - 8^2$$

$$x = \sqrt{} = \boxed{} \text{ cm}$$

(b)

Note: Red dotted line is a newly added line to form a right angled triangle. Point T is a newly added point.

$$SR = PQ = PS = \boxed{} \text{ cm}$$

$$UT = 12 - 1 - 2 = \boxed{}$$

$$x^2 = 9^2 + \boxed{}^2$$

$$x = \sqrt{} = \boxed{} \text{ cm}$$
