Good, childhood, race, womb, develop, parents, baby, retire, teenagers, active, attention, fertilized, walk, eggs, dependent, adolescents, skills, adulthood, health, opposite, senescence, nine, interact, diet, embryo, sociable

Life begins for the human in the mother's where a egg becomes an embryo (that is, an unborn offspring). After months of pregnancy a is born and remains totally dependent on its parents. During this stage, a child needs constant and a proper to develop healthy and happy. As babies age they move into the third stage called . During this stage they become more active and less dependent on their parents. They develop like speech and reading, they learn how to and jump. More importantly they learn how to with other persons including children their age. As children develop into (or teenagers) they become even more and spend more time with friends and less time with their parents. They bodies start to and they become physically attracted to the sex. They have to make choices when facing moral dilemmas and manage their physical feelings. also need to plan their careers and make educational decisions that will affect their future. During persons become parents. As they need to provide emotionally and physically for their children and also discipline them to ensure they develop socially. During late adulthood women go through menopause. At this stage women produce less of the hormone estrogen and no longer produce , which means they can no longer have children. During the last stage of the human life cycle called , persons from their jobs, become even less active and experience many issues. Some of these issues include senility, arthritis and many more. It is during this last stage that humans become on family again. At the end of life persons have contributed to society by raising well-adjusted children, work and supported their family and society and added value to the human .
