Adding & Subtracting Fractions

1. Find the following. Write your final answer in lowest terms.

a. $\frac{5}{9}+\frac{1}{6}$

LCD = $\square$

$\frac{\square}{\square} + \frac{\square}{\square} = \frac{\square}{\square}$

b. $2\frac{1}{4}-1\frac{2}{3}=$

$\frac{\square}{\square} - \frac{\square}{\square}$

LCD = $\square$

$\frac{\square}{\square} - \frac{\square}{\square} = \frac{\square}{\square}$

2. Find the following. Remember to write your final answer in lowest terms.

a. $1\frac{3}{4}-\frac{5}{6}+2\frac{2}{3}$

$\square\frac{\square}{\square} - \square\frac{\square}{\square} + \square\frac{\square}{\square}$

LCD = $\square$

$\square\frac{\square}{\square} - \square\frac{\square}{\square} + \square\frac{\square}{\square} = \frac{\square}{\square} = \square\frac{\square}{\square}$

b. $2\frac{2}{5}+3\frac{3}{4}-4\frac{3}{10}$

$\square\frac{\square}{\square} + \square\frac{\square}{\square} - \square\frac{\square}{\square}$

LCD = $\square$

$\square\frac{\square}{\square} + \square\frac{\square}{\square} - \square\frac{\square}{\square} = \frac{\square}{\square} = \square\frac{\square}{\square}$
