HAS-HAVE-HAD

D- Read the text carefully.

The importance of shapes in architecture and engineering.

Most students learn about geometric shapes in school. But architects also need to understand them.

Basic shapes appear in many historical buildings, like the Roman Coliseum. Most buildings have a rectangle or square shape but the Coliseum is an ellipse or oval. It has got many arches supported by columns, which are cylinders.

All these shapes add support, structure and style, all at the same time.

E- Read the text and answer T or F

Teachers teach geometric shapes at school.

You can find basic shapes in historical buildings.

The Roman Coliseum is a historical building.

The Roman Coliseum is a cylinder.

Arches add support to the structure.
