

NATURAL UNIT 1

1. Write the name of the body systems:

2. Write the number of the body system after the correct definition.

1 Circulatory system	2 Digestive system	3 Respiratory system	4 Locomotor system
5 Nervous system	6 Excretory system	7 Reproductive system	

It allows us to move (walk, jump, run).

It extracts nutrients from the food we eat.

It helps eliminate waste from the body.

It breaths in air to get oxygen.

It makes blood move around the body.

It is different in boys and girls.

It controls our body, allowing the different parts to communicate. It gives orders.

3. What is a body system?

4. Write the name of the system it belongs to after each part. Choose respiratory, circulatory or reproductive:

Urethra

Nose

Atrium

Capillaries

Heart

Lungs

Uterus

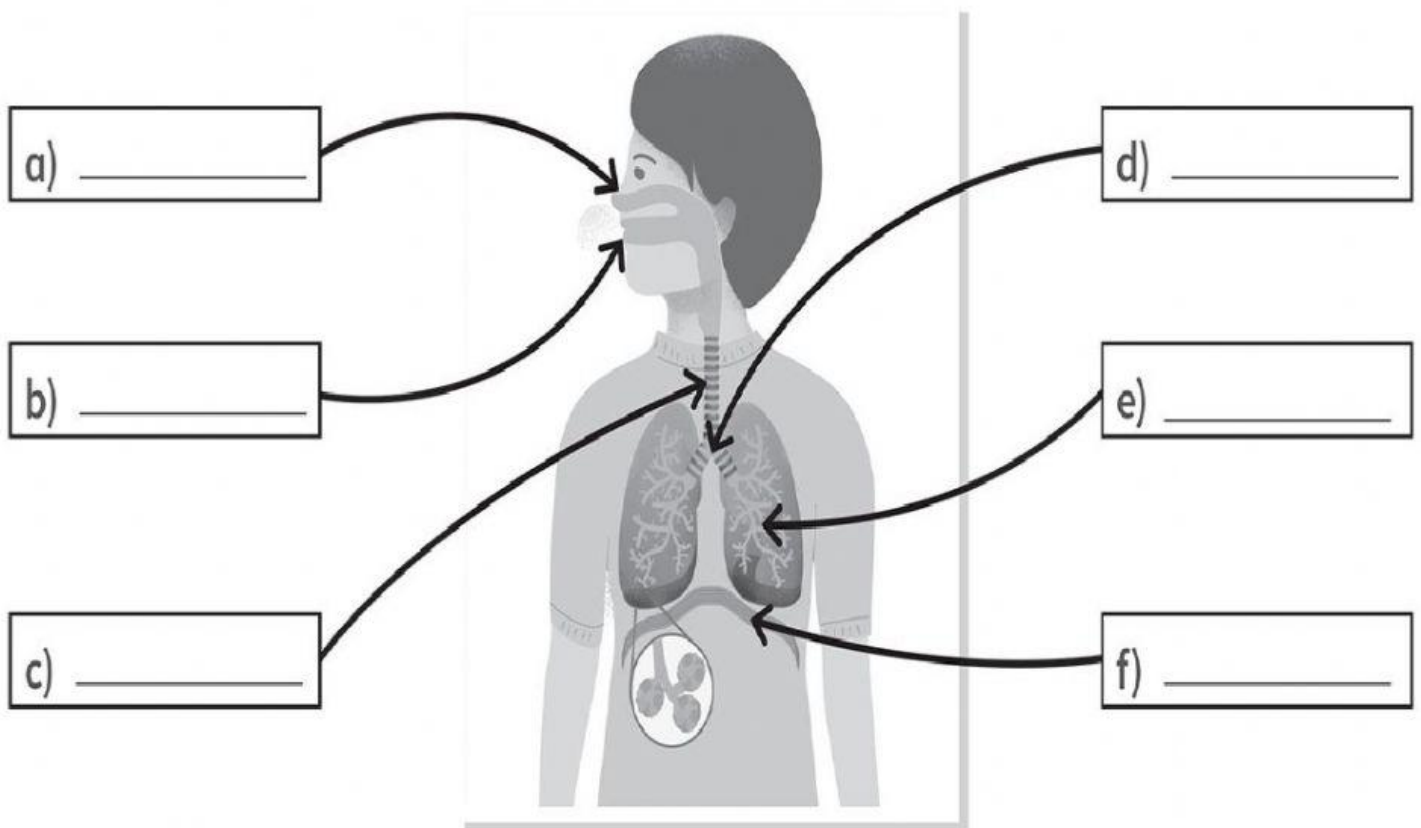

Diaphragm

Bronchi

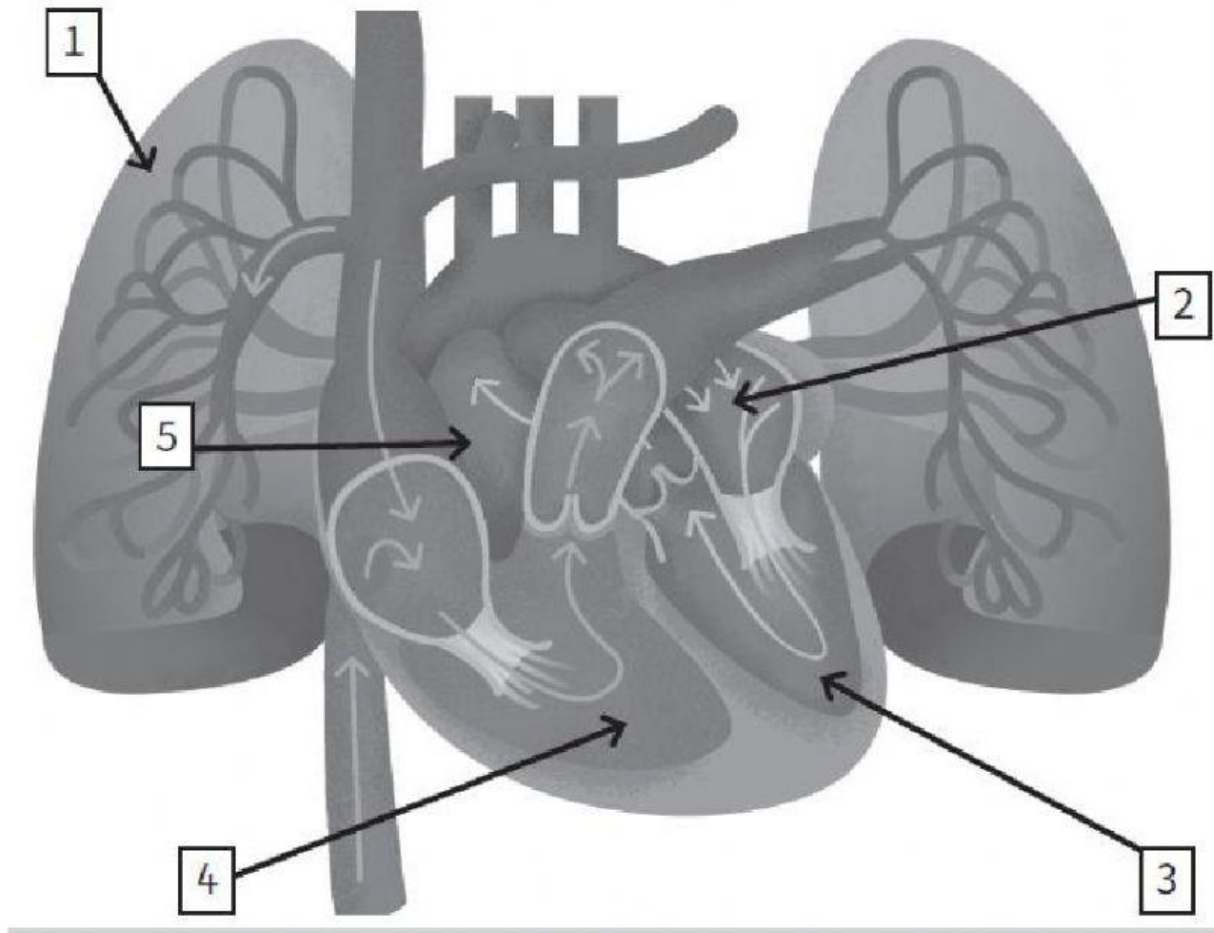

Veins

Fallopian tubes

5. Complete the picture with the parts of the respiratory system:

6. Match the numbers with the parts:

Left atrium

Right ventricle

Right atrium

Left ventricle

Lung

7. True or false?

- For humans, pregnancy last 9 months.
- The testicles produce the female sex cells, called ova.
- Veins, arteries and capillaries are blood vessels.
- Arteries carry blood from the body back to the heart.
- We breathe in oxygen and breathe out carbon dioxide.
- The tiny air sacs in the lungs are the bronchi.
- The vagina connects the uterus to the outside of the female body.
- Humans perform asexual reproduction: only one parent is needed to make babies.
- The heart pumps blood.
- Air doesn't enter our body through the mouth and the nose.
