It is hard to think of what homes will look like in the future. Over the last 30 years, there has already been so much change. Who would have believed back in the 1970s that today, we would be living in such a technological world? So, imagining the future is hard given how quickly things change. Household routines are becoming far better for the environment. I think we will be using more clean energy at home in the future. For example, we will be using far more solar energy than now and as well as solar panels to replace the batteries we have been using for years.

Hopefully, there will be a lot less rubbish in the future compared to now, so putting out the rubbish will be a thing of the past. There will be nowhere near as much non-biodegradable rubbish as today because companies will be rewarded for making their products out of biodegradable and sustainable materials. We will see far more recycling done at home such as using composting bins. Maybe there will be a lot more robots used around the house. All we will have to do is set up a program and push a button !

Q1. Today, we are living in a time where \_\_\_\_\_.

- a) there are new homes
- b) there is a lot of technology
- c) there aren't many changes

Q2. Past household routines were not good for the \_\_\_\_\_.

- a) home
- b) companies
- c) environment

Q3. In the past people used more \_\_\_\_\_.

- a) batteries
- b) solar energy
- c) clean energy

Q4. Businesses will be rewarded for \_\_\_\_\_.

- a) making non-biodegradable materials
- b) using recyclable products
- c) producing sustainable materials

Q5. The text is about \_\_\_\_\_.

- a) homes of the past
- b) household routines being more environmentally friendly
- c) people using non-biodegradable products
