C. READING COMPREHENSION. Read the text carefully.

**Reading
Conspiracy theorists**

Did Neil Armstrong really walk on the moon in 1969, or was the event filmed in a TV studio? Was the American president John F. Kennedy assassinated by a lone gunman in 1963, or was it all a complicated plot involving the Vice-President, Lyndon Johnson? When it comes to major events such as moon landings or assassinations, the deaths of celebrities, or deadly terrorist bombings, the only thing we can really count on is that thousands of people online will refuse to accept the obvious true story behind each event, and will look for stranger, more exciting explanations. These are the conspiracy theorists, and there are more of them than you'd think. In some polls, one fifth of the American population genuinely believes that nobody went to the moon in 1969, and that Kennedy died on the orders of his Vice-President.

For social scientists, the interesting question is why people are so quick to believe conspiracy theories. For many years, these scientists believed the phenomenon was a form of paranoia. People who accused the government of a cover-up, or blamed aliens for causing a disaster were described as part of a small minority of people with a form of mental illness. While this may actually be true for a few individuals, it clearly has its limitations as a theory, to my mind at least. It doesn't explain, for example, why so many people admit to searching for unusual reasons behind events. Millions of us do this! Since not everybody is mentally ill, social scientists are now looking for a better explanation for the public's love of a conspiracy theory.

Research has shown that people believe conspiracy theories for a variety of reasons. One is that they don't trust official explanations. We live in a world in which we are used to being misled. Advertising agencies are always telling us something is true, when it clearly isn't, companies we rely on, such as gas and electricity suppliers, are not always straight with us, and we know politicians regularly exaggerate the positive things they achieve. Against this background, it is not surprising that people don't accept what they are officially told. Moreover, people are also influenced by their own ideological beliefs to interpret events in particular ways. So, for example, people who strongly believe that bankers are untrustworthy may interpret a decline in the economy as a terrible plan by bankers to make themselves rich. A further explanation for believing in conspiracies is that most ordinary people feel powerless and insecure. We don't like to face the truth that terrible things do sometimes take place. Instead, we create a conspiracy theory as a way of explaining something so that it makes sense to us.

Read the text. Choose the correct answers.

1 In the opening paragraph, which of the following does the writer not provide?

- A A description of what a conspiracy theorist is.
- B Statistics showing the extent to which conspiracy theories are believed.
- C Examples of historical events some believe to be hoaxes.
- D An explanation of what happened during the day Kennedy was killed.

2 According to the writer, in paragraph 2, which of the following areas of study most interests social scientists?

- A The background of people most likely to become conspiracy theorists.
- B The reason behind some people's tendency to become conspiracy theorists.
- C The symptoms of illness shown by conspiracy theorists.
- D The types of strange things that conspiracy theorists believe.

3 Which of the following is expressed as an opinion rather than a fact by the writer in paragraph 2?

- A Something many social scientists once believed to be true is not a very good explanation.
- B A lot more people are interested in conspiracy theories now than in the past.
- C We now know that mental illness can't be a reason why anyone becomes a conspiracy theorist.
- D Social scientists don't seem able to change their view of conspiracy theorists.

4 In paragraph 3, the writer gives three reasons why people believe in conspiracy theories. Which reason below is not mentioned in the text?

- A People in positions of power or authority are known to tell lies, so how can we believe what they say.
- B We all have our own views of the world, and this affects the way we view what happens in the world.
- C Life is full of uncertainty, so we interpret negative events in a way that helps us understand the world.
- D People are naturally creative, so we use that creativity to make the world seem a better place.

5 According to the writer, how do people who become conspiracy theorists often feel?

- A unable to trust their own views and feelings
- B uncertain about ideologies that want to influence them
- C unable to really influence events in the world
- D unwilling to accept that their views may be wrong
