

PLASTICS (/plastiks/) FORMATION TECHNIQUES KEY WORDS

Watch the video. Then fill the gaps properly by using the terms and the images.

<https://youtu.be/HkzHiBdPgNQ>

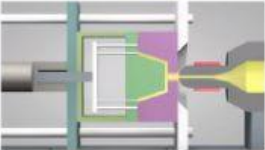

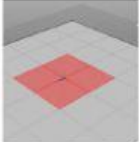

TERM	DEFINITION	IMAGE
	the process of forming something by forcing or pushing it out, especially through a small opening.	
	a space entirely empty of matter.	
	the process of laminating .	
	the act of injecting .	
	the act of compressing .	
lamination /lamineichon/	extrusion /ikstrushon/	injection /inyekshon/
		
		vacuum /vakium/
		
		compression /kompreshon/
		

TERM	DEFINITION	IMAGE
	any solid substance reduced to a state of fine, loose particles (partículas finas y sueltas) by crushing (trituración), grinding (molienda)...	
	a little grain, a small particle.	
	a sticky substance used to plastics, or for use in industry.	
	a piece of metal with a raised edge twisting round along its length.	
	a narrow piece attached to the end of a tube so that the liquid or air that comes out can be directed in a particular way.	
powder /pauda/	screw /skru/	granule /graniul/
		
		nozzle /nozel/
		
		resin /rezin/
		

TERM	DEFINITION	IMAGE
	a cylindrical object in a machine that turns over and over in order to carry things along or press them down or together.	
	a large tube , wide at one end, <u>through</u> which large amounts of small things can be moved <u>from</u> one place to another.	
	a device that produces heat.	
	a container (/konteina/) for keeping something cool.	
	to put to use (poner en uso), especially for a particular purpose .	

roller /roula/	cooler /küla/	to apply /aplai/	hopper /jöpa/	heater /jita/
				

TERM	DEFINITION	IMAGE
	to use physical strength or effort to make something move or open .	
	to form something by forcing or pushing it out, especially through a small opening .	
	to make a soft substance have a particular shape.	
	to form into a thin plate , as by beating (golpeando /bitin/) or rolling .	
	to make or produce . to make something into a particular shape .	

to extrude /ekstrud/	to mould /mold/	to force//to pass	to form /föm/	to laminate /lamineit/
				

TERM	DEFINITION	IMAGE
	to move something along with a current of air .	
	the force that, <i>owing to pressure differences</i> , attracts a fluid or solid to where the pressure is lowest .	
	to make or produce something. to make or produce <i>by hand or machinery</i> , especially on a large scale.	
	to force (a fluid) into a tube, pipe...	

to blow /blou/	to suction /sakchon/	to inject /inyekt/	to manufacture /maniufakcha/
