

7. Let A = The set of all natural numbers less than 8, B = The set of all prime numbers less than 8, C = The set of even prime number. Verify that (i) $(A \cap B) \times C = (A \times C) \cap (B \times C)$ (ii) $A \times (B - C) = (A \times B) - (A \times C)$

Solution :

Given $A = \{\text{-----}\}$ $B = \{\text{-----}\}$ $C = \{-\}$

(i) To verify : $(A \cap B) \times C = (A \times C) \cap (B \times C)$

$$A \cap B = \{\text{-----}\}$$

$$\therefore (A \cap B) \times C = \{\text{-----}\} \dots (1)$$

$$A \times C = \{\text{-----}\}$$

$$B \times C = \{\text{-----}\}$$

$$(A \times C) \cap (B \times C) = \{\text{-----}\} \dots (2)$$

$\therefore$ From (1) and (2), LHS = RHS.

(ii) To verify : $A \times (B - C) = (A \times B) - (A \times C)$

$$B - C = \{\text{-----}\}$$

$$\therefore A \times (B - C) = \{\text{-----}\}$$

$$A \times B = \{\text{-----}\}$$

$$A \times C = \{\text{-----}\}$$

$$\therefore (A \times B) - (A \times C) = \{\text{-----}\} \dots (2)$$

$\therefore$ From (1) and (2), LHS = RHS.
