*Read the following passage and mark the letter A, B, C or D on your answer sheet to indicate the correct word for each of the blanks from 34 to 38.*

Everyone wants to reduce pollution. But the pollution (34) \_\_\_\_\_ is as complicated as it is serious. It is complicated because much pollution is caused by things that benefit people. (35) \_\_\_\_\_, exhaust from automobiles causes a large percentage of air pollution. But the automobile provides transportation for millions of people. Factories discharge much of the material that pollutes the air and water but factories give (36) \_\_\_\_\_ to a large number of people.

Thus, to end or greatly reduce pollution immediately, people would have to (37) \_\_\_\_\_ using many things that benefit them. Most people do not want to do that, of course. But pollution can be gradually reduced in several ways. Scientists and engineers can work to find ways to lessen the amount

---

of pollution that such things as automobiles and factories cause. Governments can pass and enforce laws (38) \_\_\_\_\_ require businesses and traffic to stop, or to cut down on certain polluting activities.

- Question 34.**    A. event                      B. accident                      C. work                      D. problem
- Question 35.**    A. As a result                      B. However                      C. Therefore                      D. For example
- Question 36.**    A. employed                      B. employment

**Read the following passage and mark the letter A, B, C, or D on your answer sheet to indicate the correct answer to each of the questions from 39 to 43.**

By adopting a few simple techniques, parents who read to their children can considerably increase their children's language development. It is surprising, but true. How parents talk to their children makes a big difference in the children's language development. If a parent encourages the child to actively respond to what the parent is reading, the child's language skills increase.

A study was done with two or three-year-old children and their parents. Half of the thirty children participants were in the experimental study; the other half acted as the control group. In the experimental group, the parents were given a two-hour training session in which **they** were taught to ask open-ended questions rather than yes-no questions. For example, the parent should ask, "What is the doggy doing?" rather than, "Is the doggy running away?" Experimental parents were also instructed how to expand on their children's answer, how to suggest alternative possibilities, and how to praise correct answers.

At the beginning of the study, the children did not differ on levels of language development, but at the end of one month, the children in the experimental group were 5.5 months ahead of the control group on a test of verbal expression and vocabulary. Nine months later, the children in the experimental group still showed an advance of 6 months over the children in the control group.

**Question 39. Parents can give great help to their children's language development by \_\_\_\_\_ them.**

- A. responding to                      B. reading to                      C. adopting                      D. experimenting

**Question 40. what does the word "they" in the second paragraph refer to?**

- A. Participants                      B. Children                      C. Questions                      D. Parents

**Question 41. During the training session, experimental parents were taught to \_\_\_\_\_.**

- A. use yes-no questions                      B. study many experiments  
C. ask open-ended questions                      D. give correct answers

---

**Question 42. what was the major difference between the control group and the experimental one in the study?**

- A. The number of participants.
- B. The books that were read.
- C. The age of the children.
- D. The training that parents received.

**Question 43. What conclusion can be drawn from this passage?**

- A. Children who read actively always act six months earlier than those who don't.
- B. The more children read, the more intelligent they become.
- C. Two or three-year-old children can be taught to read actively.
- D. Children's language skills increase when they are required to respond actively.

**Read the following passage and mark the letter A, B, C, or D on your answer sheet to indicate the correct answer to each of the questions from 44 to 50.**

The elements other than hydrogen and helium exist in such small quantities that it is accurate to say that the universe is somewhat more than 25 percent helium by weight and somewhat less than 75 percent hydrogen.

Astronomers have measured the abundance of helium throughout our galaxy and in other galaxies as well. Helium has been found in old stars, in relatively young ones, in interstellar gas, and in the distant objects known as quasars. Helium nuclei have also been found to be constituents of cosmic rays that fall on the earth (cosmic rays are not really a form of radiation; they consist of rapidly moving particles of numerous different kinds). It doesn't seem to make very much difference where the helium is found. Its relative abundance never seems to vary much. In some places, there may be slightly more of it; in others, slightly less, but the ratio of helium to hydrogen nuclei always remains about the same. Helium is created in stars. In fact, nuclear reactions that convert hydrogen to helium are responsible for most of the energy that stars produce. However, the amount of helium that could have been produced in this manner can be calculated, and it turns out to be no more than a few percent. The universe has not existed long enough for this figure to be significantly greater. Consequently, if the universe is somewhat more than 25 percent helium now, then it must have been about 25 percent helium at a time near the beginning.

However, when the universe was less than one minute old, no helium could have existed. Calculations indicate that before this time temperatures were too high and particles of matter were moving around much too rapidly. It was only after the one- minute point that helium could exist. By this time, the universe had cooled so sufficiently that neutrons and protons could stick together. But the nuclear reactions that led to the formations of helium went on for only relatively short time. By the time the universe was a few minutes old, helium production had effectively ceased

**Question 44. What does the passage mainly explain?**

- A. Why hydrogen is abundant.

- 
- B. How stars produce energy.
  - C. When most of the helium in the universe was formed.
  - D. The difference between helium and hydrogen.

**Question 45. According to the passage, helium is \_\_\_\_\_.**

- A. difficult to detect.
- B. the oldest element in the universe.
- C. the second-most abundant element in the universe.
- D. the most prevalent element in quasars.

**Question 46. The word “constituents” is closest in meaning to \_\_\_\_\_.**

- A. causes
- B. relatives
- C. components
- D. targets

**Question 47. The word “they” refers to \_\_\_\_\_.**

- A. radiation
- B. constituents
- C. cosmic rays
- D. particles

**Question 48. The word “vary” is closest in meaning to \_\_\_\_\_.**

- A. include
- B. mean
- C. stretch
- D. change

**Question 49. The creation of helium within stars \_\_\_\_\_.**

- A. cannot be measured
- B. produces hydrogen as a by-product
- C. produces energy
- D. causes helium to be much more abundant in old stars than in young stars

**Question 50. Most of the helium in the universe was formed \_\_\_\_\_.**

- A. in a very short time
- B. in interstellar space
- C. before most of the hydrogen
- D. during the first minute of the universe's existence
