Match.

GALLBLADDER	Food is chewed in the mouth and mixed with saliva. We call this mixture bolus.
LARGE INTESTINE	In the large intestine indigested food, what your body doesn't need, is mixed with water to be eliminated through you anus.
LIVER	In the small intestine food is mixed with bile and digestive enzymes. It breaks down food into nutrients your body can absorb.
OESOPHAGUS	Muscles in the oesophagus push the bolus down into the stomach.
ORAL CAVITY	The stomach is like a mixer. It breaks food don into smaller pieces and mixes it with gastric juices.
PANCREAS	Your gallbladder stores the bile produced by your liver.
SMALL INTESTINE	Your liver produces a liquid called bile.
STOMACH	Your pancreas produces digestive enzymes.
