

NAME: _____ List No. _____

1. Name the three parts of the circulatory system.

____/3

2. Match the terms and their definitions.

____/3

Capillaries •

- They carry blood **from the rest** of the body to the heart.

Arteries •

- They transport the blood **around the body**.

Veins •

- They carry blood **from the heart** to the rest of the body.

3. Circle the correct term to complete the text.

____/6

The heart never stops, this movement is called a **heartbeat/circulation**.

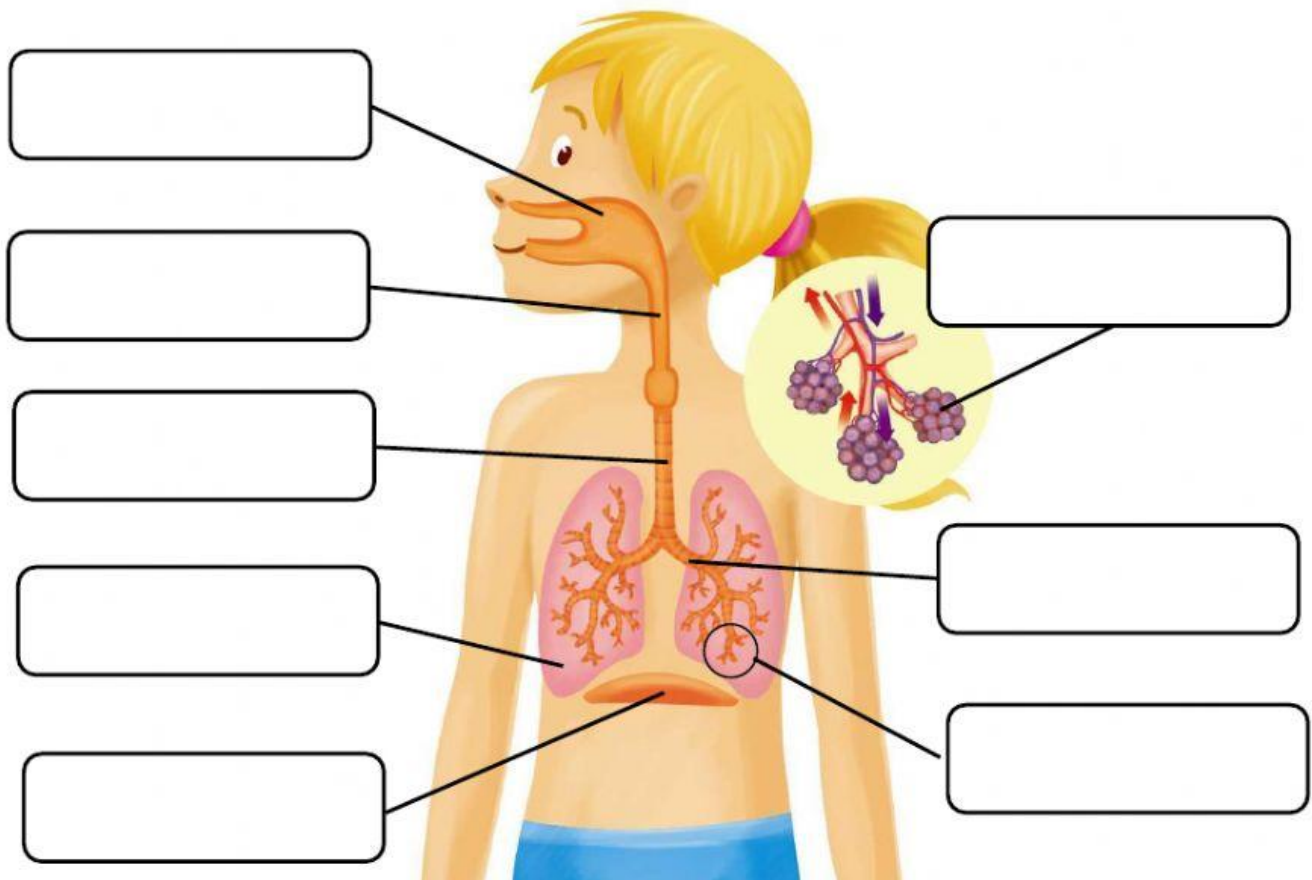

There are two types of movement:

- When the heart **contracts / relaxes**, it fills with blood received from the veins.
- When the **contracts / relaxes**, it pushes the blood into the arteries.

They carry the blood to the rest of the body.

4. Label the parts of the respiratory system.

___/8

5. Complete the text.

___/6

• contracts
• carbon dioxide

• smaller
• relaxes

• oxygen
• bigger

- During **inhalation** the diaphragm _____ and the lungs get _____. They fill with air from the nasal cavity.
- Along the **gas exchange**, the _____ we inhale passes through the alveoli and into the blood. At the same time, _____ passes from the blood into the lungs.
- During **exhalation**, the diaphragm _____ and the lungs get _____. This pushes carbon dioxide out of the body.

6. Label the three phases of the respiration process on the correct picture and number them. ___/3
