3.

Customer review

PCmad13 : ★★★☆☆

The new XR2 printer is quite cheap, but it's not perfect. Using it can be a really (1) [____ ▼] experience; it takes about five minutes to get ready when you switch it on! But when it gets started, it's a very (2) [____ ▼] machine – we've used it every day since we bought it six months ago, and it has never broken or stopped working. Also, it produces really (3) [____ ▼] printing – our photos are as good as professional ones. The only thing is that it's quite big and (4) [____ ▼], so it's not very (5) [____ ▼] or easy to move around. It can be used with Wi-Fi though, so this isn't really a problem. Also, the instruction manual is completely (6) [____ ▼] – it doesn't help at all. Finally, I don't know why, but software updates are not (7) [____ ▼], so you have to download them yourself from the internet. But on the whole, this isn't a bad printer!
