

Jan. 11-15 Primary vs. Secondary Succession

Directions: Drag and drop the descriptions of primary and secondary succession in the correct part of the Venn Diagram. The first one has been done for you as an example.

No previous life

Happens over a long

Happens more quickly than the other type of succession

Would occur after a forest fire or after humans clear a part of a forest

Shrubs and small trees grow

The end result is a climax community

Would occur after a volcanic eruption or a glacier exposing new rock

Soil is already present when this type of succession begins
