THE BLUEPLANET

Earth is called the blue planet. Do you know why?
From space the Earth looks like blue because it has got a lot of water. Water exists in three states.

- Water can be SOLID. Think of ice and snow.
- Water can be LIQUID. This is the water we drink.
- Water can also be a GAS. We call this vapour or steam.

Every living thing on Earth contains water. An elephant is **70** percent water; a tomato is **90** percent water; mice and people are **65** percent water.

MARCH 22ND - WATER DAY

READ, LISTEN AND CHOOSE THE CORRECT ANSWERS:

(more than one answer can be correct)

- The Earth is called the blue planet because...
  - It looks blue from space
  - It has got a lot of water
- When water is solid, we call it...
  - Water
