

PARTS OF A RIVER

	This is where the river is still young and quite small, often up in the hills.
	This is a smaller river that flows into a bigger river.
	This is when the river gets larger. It has more water and flows more slowly in a flat area.
	This is where the river starts.
	This is where a river meets the sea or ocean.
	This is fresh water that filters through the ground.
	This is a large area of fresh water surrounded by land. It is a natural deposit of water.
	This is smaller than a lake.
	This is a large, flowing body of fresh water.
	This is the last part of the river, when it approaches the sea.
