

PASSAGE 1

INDUSTRIALIZATION IN THE NETHERLANDS AND SCANDINAVIA

While some European countries, such as England and Germany, began to industrialize in the eighteenth century, the Netherlands and the Scandinavian countries of Denmark, Norway, and Sweden developed later. All four of these countries lagged considerably behind in the early nineteenth century. However, they industrialized rapidly in the second half of the century, especially in the last two or three decades. In view of their later start and their lack of coal—undoubtedly the main reason they were not among the early industrializers—it is important to understand the sources of their success.

All had small populations. At the beginning of the nineteenth century, Denmark and Norway had fewer than 1 million people, while Sweden and the Netherlands had fewer than 2.5 million inhabitants. All exhibited moderate growth rates in the course of the century (Denmark the highest and Sweden the lowest), but all more than doubled in population by 1900. Density varied greatly. The Netherlands had one of the highest population densities in Europe, whereas Norway and Sweden had the lowest. Denmark was in between but closer to the Netherlands.

Considering human capital as a characteristic of the population, however, all four countries were advantaged by the large percentages of their populations who could read and write. In both 1850 and 1914, the Scandinavian countries had the highest literacy rates in Europe, or in the world, and the Netherlands was well above the European average. This fact was of enormous value in helping the national economies find their niches in the evolving currents of the international economy.

Location was an important factor for all four countries. All had immediate access to the sea, and this had important implications for a significant international resource, fish, as well as for cheap transport, merchant marines, and the shipbuilding industry. Each took advantage of these opportunities in its own way. The people of the Netherlands, with a long tradition of fisheries and mercantile shipping, had difficulty in developing good harbors suitable for steamships; eventually they did so at Rotterdam and Amsterdam, with exceptional results for transit trade with Germany and central Europe and for the processing of overseas foodstuffs and raw materials (sugar, tobacco, chocolate, grain, and eventually oil). Denmark also had an admirable commercial history, particularly with respect to traffic through the Sound (the strait separating Denmark and Sweden). In 1857, in return for a payment of 63 million kroner from other commercial nations, Denmark abolished the Sound toll dues, the fees it had collected since 1497 for the use of the Sound. This, along with other policy shifts toward free trade, resulted in a significant increase in traffic through the Sound and in the port of Copenhagen.

The political institutions of the four countries posed no significant barriers to industrialization or economic growth. The nineteenth century passed relatively peacefully for these countries, with progressive democratization taking place in all of them. They were reasonably well governed, without notable corruption or grandiose state projects, although in all of them the government gave some aid to railways, and in Sweden the state built the main lines. As small countries dependent on foreign markets, they had few or low barriers to foreign trade in the main, though a protectionist movement developed in Sweden. In Denmark and Sweden agricultural reforms took place gradually from the late eighteenth century through the first half of the nineteenth, resulting in a new class of peasant landowners with a definite market orientation.

The key factor in the success of these countries (along with high literacy, which contributed to it) was their ability to adapt to the international division of labor determined by the early industrializers and to stake out areas of specialization in international markets for which they were especially well suited. This meant a great dependence on international commerce, which had notorious fluctuations; however, it also meant high returns to those aspects of production that were fortunate enough to be well placed in times of prosperity. In Sweden exports accounted for 18 percent of the national income in 1870, and in 1913, 22 percent of a much larger national income. In the early twentieth century, Denmark exported 63 percent of its agricultural production: butter, pork products, and eggs. It exported 80 percent of its butter, almost all to Great Britain, where it accounted for 40 percent of British butter imports.

[Paragraph 1](#) supports which of the following ideas about England and Germany?

- ☐ They were completely industrialized by the start of the nineteenth century.
- ☐ They possessed plentiful supplies of coal.
- ☐ They were overtaken economically by the Netherlands and Scandinavia during the early nineteenth century.
- ☐ They succeeded for the same reasons that the Netherlands and Scandinavia did.

[Paragraph 2](#) supports which of the following statements about the role played by population density in the industrialization of the Netherlands and Scandinavia?

- ☐ It was a more important factor than population size.
- ☐ It was more influential than the rate of population growth.
- ☐ It was more important in the early stages than it was later.
- ☐ It was not a significant factor.

According to [paragraphs 2 and 3](#), which of the following contributed significantly to the successful economic development of the Netherlands and of Scandinavia?

- ☐ The relatively small size of their populations
- ☐ The rapid rate at which their populations were growing
- ☐ The large amount of capital they had available for investment
- ☐ The high proportion of their citizens who were educated

The word “**exceptional**” in the passage is closest in meaning to

- ☐ extraordinary
- ☐ surprising
- ☐ immediate
- ☐ predictable

The word “abolished” in the passage is closest in meaning to

- ☐ ended
- ☐ raised
- ☐ returned
- ☐ lowered

According to [paragraph 4](#), because of their location, the Netherlands and the Scandinavian countries had all of the following advantages when they began to industrialize EXCEPT

- ☐ low-cost transportation of goods
- ☐ access to fish
- ☐ shipbuilding industries
- ☐ military control of the seas

The word “progressive” in the passage is closest in meaning to

- ☐ rapid
- ☐ partial
- ☐ increasing
- ☐ individual

The author includes the information that “a protectionist movement developed in Sweden” in order to

- ☐ support the claim that the political institutions of the four countries posed no significant barriers to industrialization or economic growth
- ☐ identify an exception to the general trend favoring few or low barriers to trade
- ☐ explain why Sweden industrialized less quickly than the other Scandinavian countries and the Netherlands
- ☐ provide evidence that agriculture reforms take place more quickly in countries that have few or low barriers to trade than in those that do not

According to [paragraph 5](#), each of the following contributed positively to the industrialization of the Netherlands and Scandinavia EXCEPT

- ☐ a lack of obstacles to foreign trade
- ☐ huge projects undertaken by the state
- ☐ relatively uncorrupt government
- ☐ relatively little social or political disruption

Which of the sentences below best expresses the essential information in the [highlighted sentence](#) in the passage? Incorrect choices change the meaning in important ways or leave out essential information.

- ☐ The early industrializers controlled most of the international economy, leaving these countries to stake out new areas of specialization along the margins.
- ☐ Aided by their high literacy rates, these countries were able to claim areas of specialization within established international markets.
- ☐ High literacy rates enabled these countries to take over international markets and adapt the international division of labor to suit their strengths.
- ☐ The international division of labor established by the early industrializers was well suited to these countries, a key factor in their success.

According to [paragraph 6](#), a major problem with depending heavily on international markets was that they

- ☐ lacked stability
- ☐ were not well suited to agricultural products
- ☐ were largely controlled by the early industrializers
- ☐ led to slower growth of local industries

According to [paragraph 6](#), what advantage could a country gain from being heavily involved in international commerce?

- ☐ A steadily rising national income
- ☐ Greater control over market fluctuations
- ☐ High returns when things went well
- ☐ A reduced need for imports

Look at the four numbers, ① ② ③ ④, that indicate where the following sentence could be added into the passage.

During this period, Sweden had the highest rate of growth of output per capita of any country in Europe, and Denmark was second.

Where would the sentence best fit?

-  ①
-  ②
-  ③
-  ④

While some European countries, such as England and Germany, began to industrialize in the eighteenth century, the Netherlands and the Scandinavian countries of Denmark, Norway, and Sweden developed later. ① All four of these countries lagged considerably behind in the early nineteenth century. ② However, they industrialized rapidly in the second half of the century, especially in the last two or three decades. ③ In view of their later start and their lack of coal—undoubtedly the main reason they were not among the early industrializers—it is important to understand the sources of their success. ④

All had small populations. At the beginning of the nineteenth century, Denmark and Norway had fewer than 1 million people, while Sweden and the Netherlands had fewer than 2.5 million inhabitants. All exhibited moderate growth rates in the course of the century (Denmark the highest and Sweden the lowest), but all more than doubled in population by 1900. Density varied greatly. The Netherlands had one of the highest population densities in Europe, whereas Norway and Sweden had the lowest. Denmark was in between but closer to the Netherlands.

An introductory sentence for a brief summary of the passage is provided in the column to the right. Complete the summary by selecting the THREE answer choices that express the most important ideas in the passage. Some sentences do not belong in the summary because they express ideas that are not presented in the passage or are minor ideas in the passage. **This question is worth 2 points.**

- ☐ Although these countries all started with small, uneducated populations, industrialization led to significant population growth and higher literacy rates.
- ☐ Thanks to their ready access to the sea, these countries enjoyed advantages in mercantile shipping, fishing, and shipbuilding.
- ☐ Because they all had good harbors for steamships, these countries started with an important advantage in the competition for transit trade.
- ☐ These countries were helped by the fact that their governments were relatively stable and honest and had policies that generally encouraged rather than blocked trade.
- ☐ These countries were successful primarily because their high literacy rates helped them fill specialized market niches.
- ☐ Because they were never fully dependent on international commerce, these countries were able to survive notorious fluctuations in international markets.

Although the Netherlands and Scandinavia began to industrialize relatively late, they did so very successfully.
