

1. Troba el comú denominador i escriu les fraccions equivalents segons aquest.

$$\frac{2}{3} \text{ i } \frac{4}{7}$$

$$\frac{3}{5} \text{ i } \frac{5}{7}$$

$$\frac{5}{6} \text{ i } \frac{2}{9}$$

$$\frac{4}{5} \text{ i } \frac{6}{10}$$

$$\frac{4}{6} \text{ i } \frac{6}{8}$$

$$\frac{9}{3} \text{ i } \frac{4}{15}$$

$$\frac{2}{4} \text{ i } \frac{3}{5}$$

$$\frac{3}{2} \text{ i } \frac{6}{8}$$

$$\frac{2}{5}, \frac{1}{3} \text{ i } \frac{3}{2}$$

$$\frac{1}{2}, \frac{3}{4} \text{ i } \frac{5}{6}$$

Ordeneu les fraccions següents de més gran a més petita:

- $\frac{3}{5}, \frac{9}{5} \text{ i } \frac{4}{5}$ ► > >
- $\frac{7}{9}, \frac{7}{3} \text{ i } \frac{7}{5}$ ► > >
- $\frac{5}{12}, \frac{11}{12} \text{ i } \frac{16}{12}$ ► > >
- $\frac{5}{3}, \frac{5}{8} \text{ i } \frac{5}{12}$ ► > >

3. Primer, reduïu cada parella de fraccions a comú denominador i, després, compara-les: > <

- $\frac{3}{5} \bigcirc \frac{4}{7}$ ► >
- $\frac{2}{3} \bigcirc \frac{5}{9}$ ► >
- $\frac{11}{10} \bigcirc \frac{5}{4}$ ► >

· Calcula les sumes següents:

$$\frac{2}{3} + \frac{7}{12}$$

$$\frac{1}{4} + \frac{8}{4}$$

$$\frac{4}{5} + \frac{5}{6}$$

$$\frac{4}{7} + \frac{6}{7}$$

$$\frac{12}{16} + \frac{14}{16}$$

$$4 + \frac{1}{3}$$

Calcula les restes següents:

$$\frac{17}{20} - \frac{14}{20}$$

$$\frac{9}{12} - \frac{3}{8}$$

$$\frac{8}{6} - \frac{2}{4}$$

$$\frac{1}{9} - \frac{1}{12}$$

$$8 - \frac{3}{2}$$

$$6 - \frac{2}{3}$$
