

THE SOLAR SYSTEM

LISTEN, AND CHOOSE THE CORRECT PICTURE

Today We will travel to planet:

You are looking at the Solar System. We are going to take a deeper look at planet:

Do you want to join us?

The Earth is the only know planet to have:
on tight! Here we go!

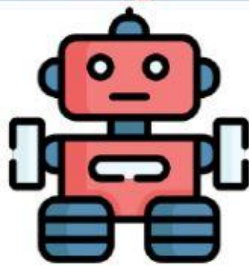

Hold

Now we are on Earth, a planet full of life, that is why it is so important for us to: and take care of the environment

Hello earthling! I am going to tell you some interesting facts about the planet where you: come from.

Like the other: , the Earth rotates around the sun and it takes: days to complete a full orbit. We call this a complete revolution.

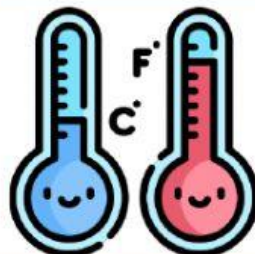

Thanks to this revolution, we have different seasons through the years and: and nights have different lengths.

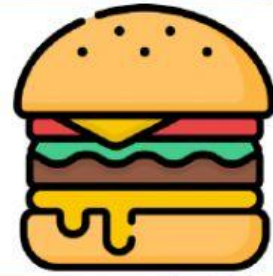

At the same time the Earth rotate around itself and it takes : hours to complete a full trip.

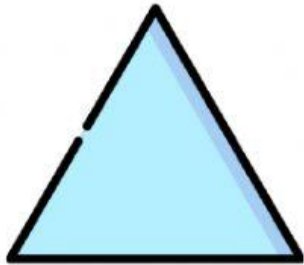

This movement is called rotation. The earth rotation is responsible for the change between day and night and for the rising and falling of:

Did you know that many years ago people thought the Earth was flat like a _____ ?

Now we can see that the Earth has the shape of a:

Approximately 70% of the Earth surface is covered in:

Did you like this quick trip around the Earth? Now is time to collect all the information you have learned.

HAVE A GOOD TRIP!
