

Read the interview with Salome Buglass below. Complete the notes.

Job now: _____

Job interest as a child: _____

Favorite school subjects: _____

Country of birth: _____

Number of times Salome changed school: _____

You're a scientist. Were you interested in science at school?

Yes, I was. But I wasn't interested in science as a career. The classes were interesting but difficult. I was interested in becoming a hairdresser!

Wow. From hairdresser to scientist. That's a big change! What were your favorite school subjects?

I was good at languages, so I enjoyed them a lot. My other favorite subjects were geography and math. I liked math because it was a language that didn't change when we moved to another country.

You moved a lot as a kid. Where were you born?

I was born in Germany, but then I lived many years in Spain, the Dominican Republic, and Ecuador. Because of my mother's job, we lived in a lot of different countries. I changed school seven times. The change was exciting, but I was always behind in school!

Was it always difficult moving from country to country?

No, it wasn't. I loved exploring new places.

What was difficult about moving a lot?

The first day in a new school was always hard, and saying goodbye was difficult too.
