

A black t-shirt is hanging from a thin, bare tree branch in a forest. The shirt is draped over the branch, with its sleeves hanging down. The background is a dense, out-of-focus green forest.

At night, these bats fly around to find food. During the day,
the bats sleep.

Bats need a lot of sleep. Some kinds of bats sleep nineteen hours a day! Then they are ready to fly at night. **1**

Can complete the organizer? Remember two questions to reflect on:

-
- ```
graph TD; C1[Clue] --> AP[Author's Purpose]; C2[Clue] --> AP;
```
- The diagram illustrates the relationship between clues and the author's purpose. It features two rectangular boxes at the top, each labeled "Clue". From the bottom center of each "Clue" box, a blue arrow points downwards. These two arrows converge towards a single, larger rectangular box at the bottom labeled "Author's Purpose". This visualizes how multiple pieces of evidence (clues) are used to determine the author's intent (purpose).

Bats hold branches with their toes and sleep upside down; some bats need 19 hours of sleep.
