

Instruction: Fill in the blank with the right box

Joint at the elbow

Joint at the wrist

Joint at the backbone

Joint at the knee

Joint at the ankle

Joint at the hip bone

Joint at the shoulder

Joint at the neck

Instruction: Fill in the blank with the right box

The joint at the shoulders, hands, and backbone make movements of the upper body possible.

The joints at the knees and hips allow the legs to bend and straighten.

The joints at the shoulder allow the arms to move the arms to move back and forth, to the sides or to make rotations.

The joint at the neck makes turning and rotation of the head possible
